

The Spatial Acquisition Device

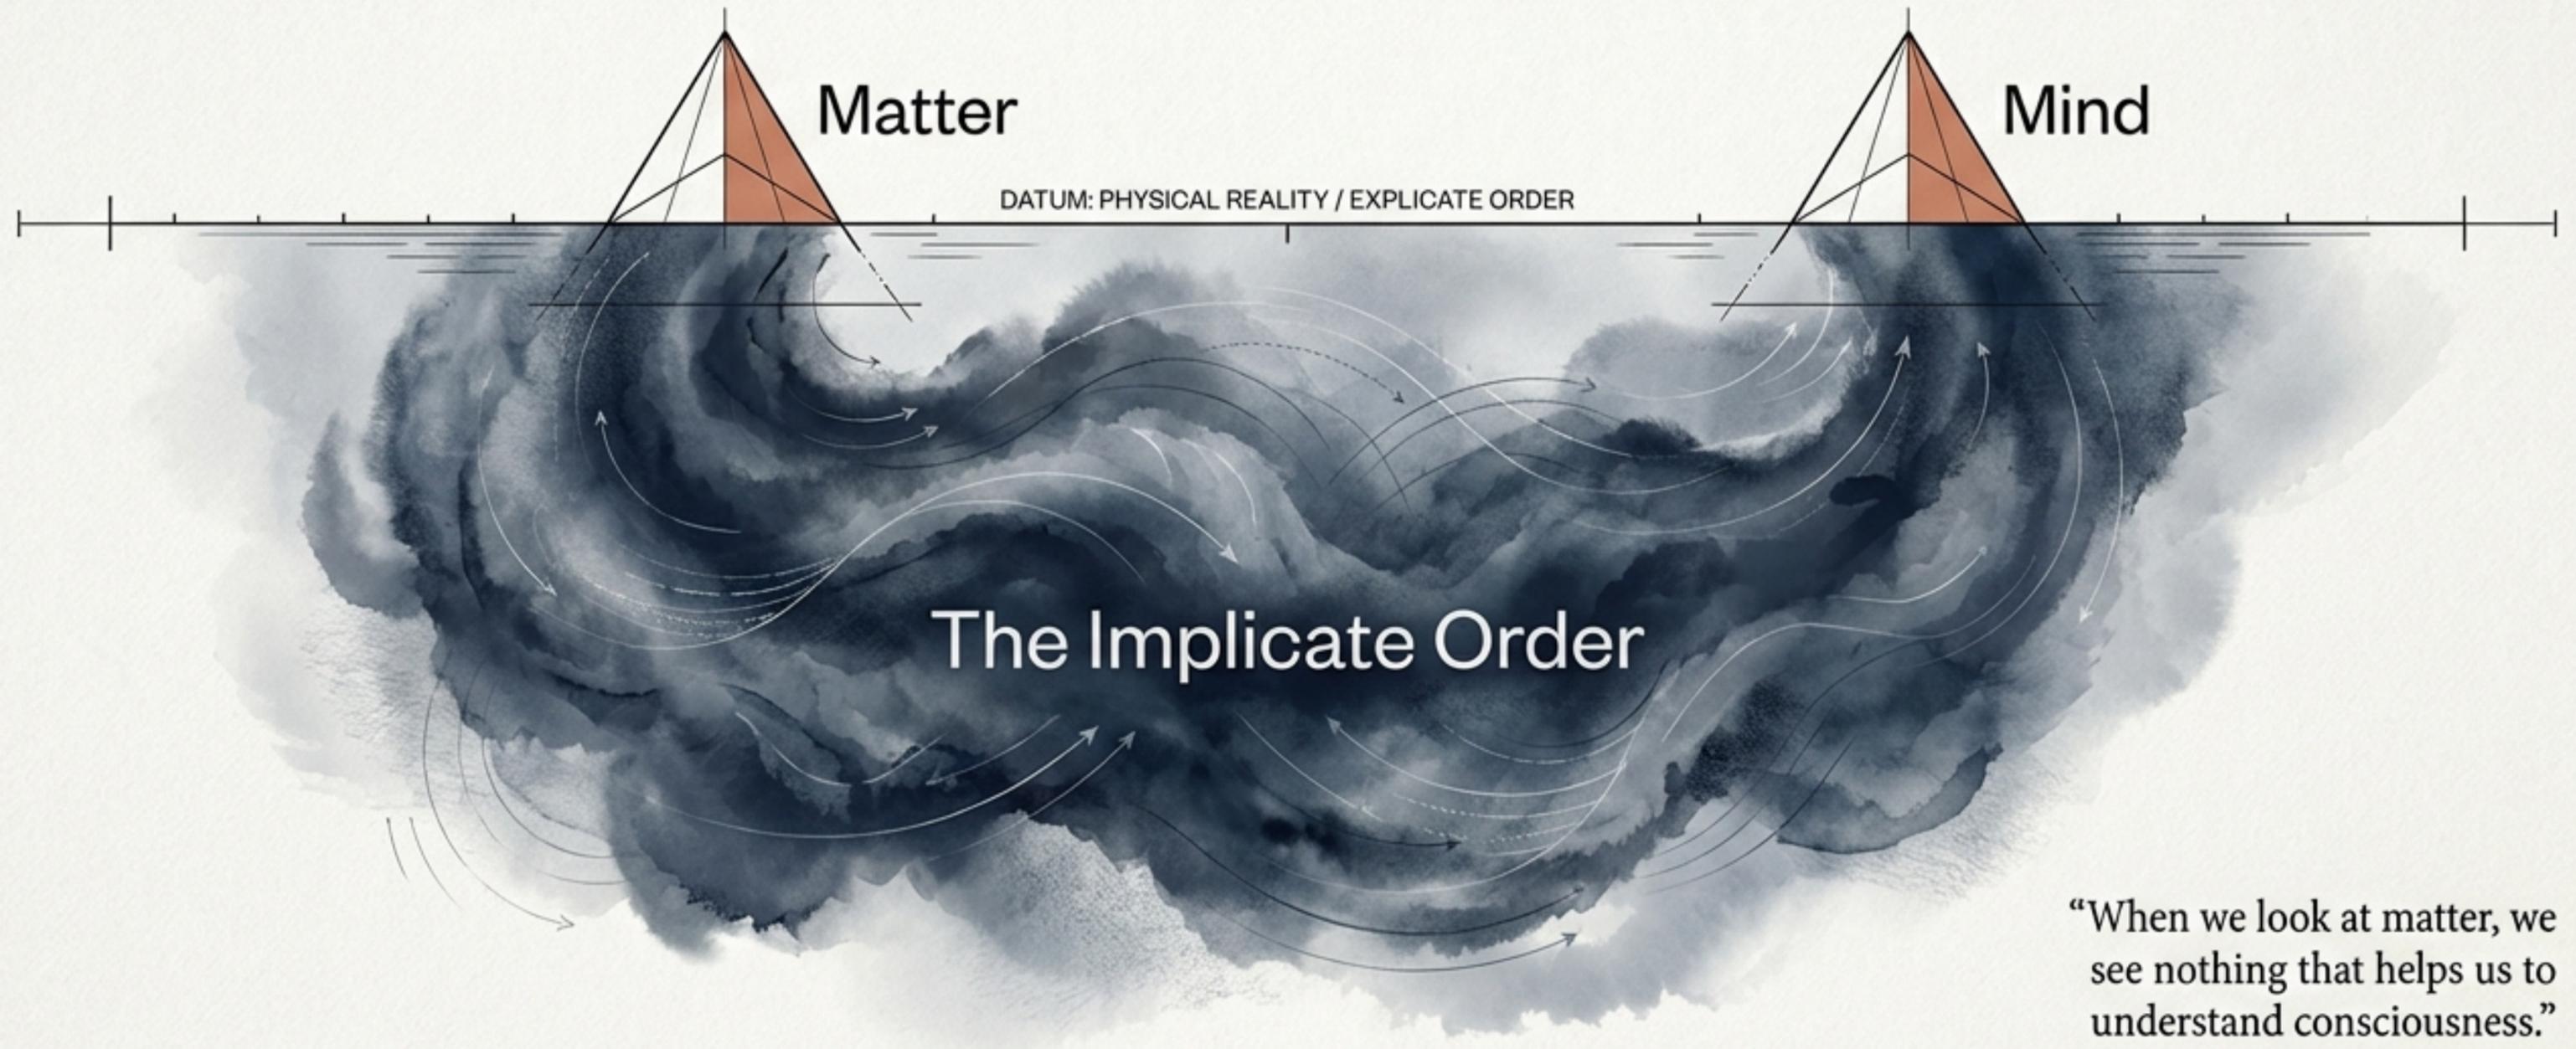

Bridging Quantum Consciousness
and Cognitive Development

A Synthesis of David Bohm & Jean Piaget

The Search for Undivided Wholeness

Quantum theory and relativity contradict each other, implying a deeper level of reality. David Bohm proposed that mind and matter are projections from a single source.

Consciousness as the Flow of Music

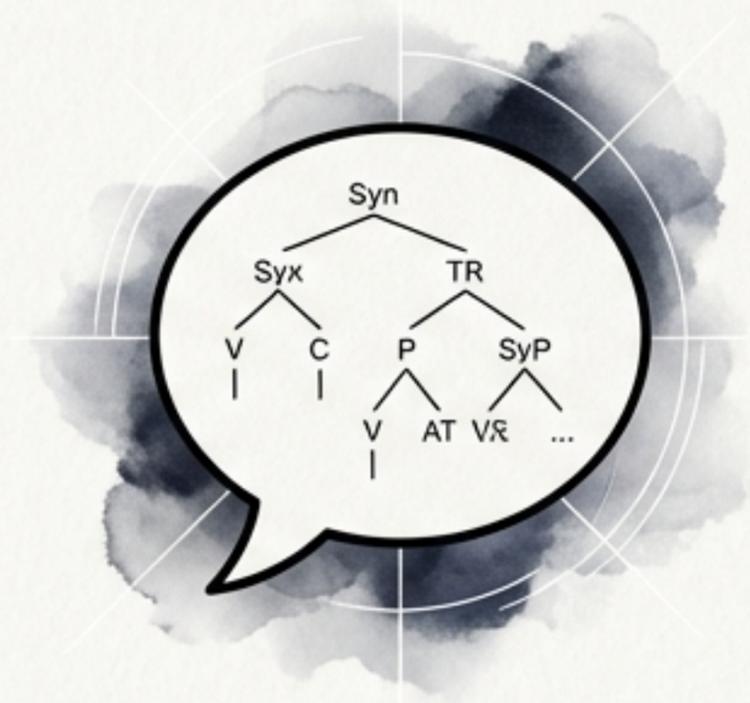

How does the brain create flow from static moments?

1. The brain holds the immediate past and present together.
2. Past notes are transformations, not just memories.
3. This coherence is consciousness emerging from the Implicate Order.

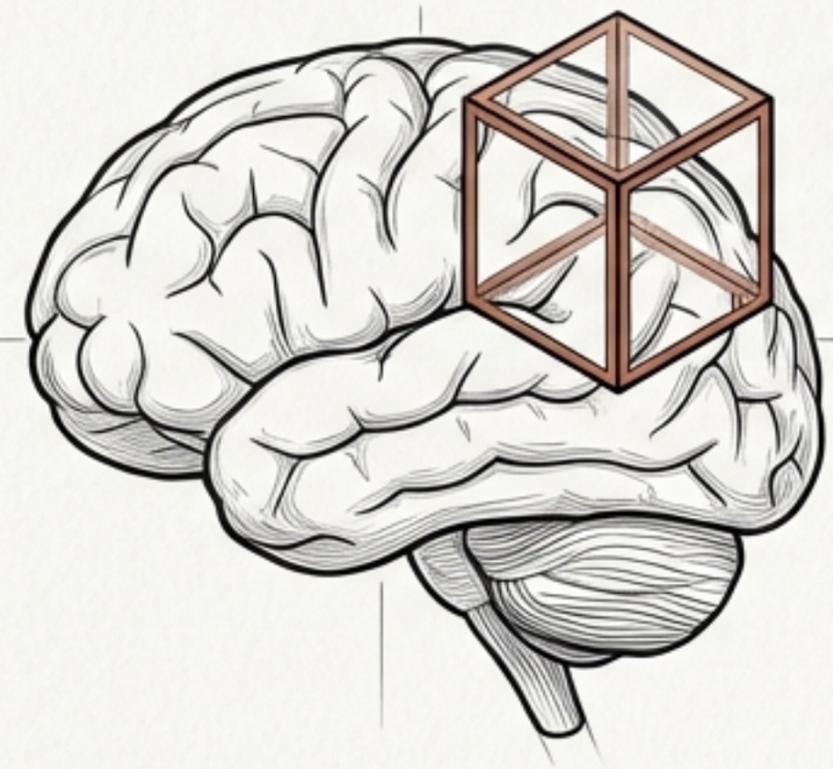

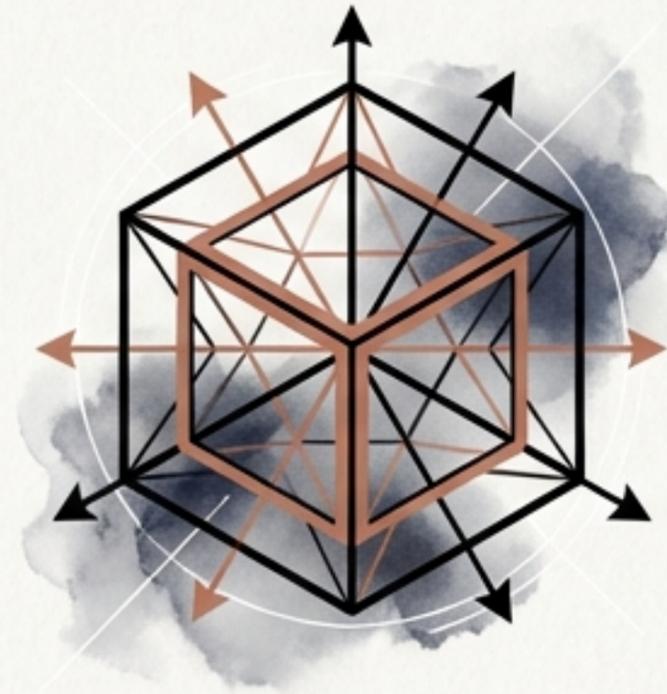

The Hypothesis: A Hard-Wired Reality

Just as Chomsky theorized a “Language Acquisition Device” for grammar, Bohm suggested a hard-wired system for understanding space and time.

The Construction of Reality in Founders Grotesk

Piaget didn't just study children; he studied how the concept of reality itself is built. Knowledge of space is not instantaneous—it is constructed.

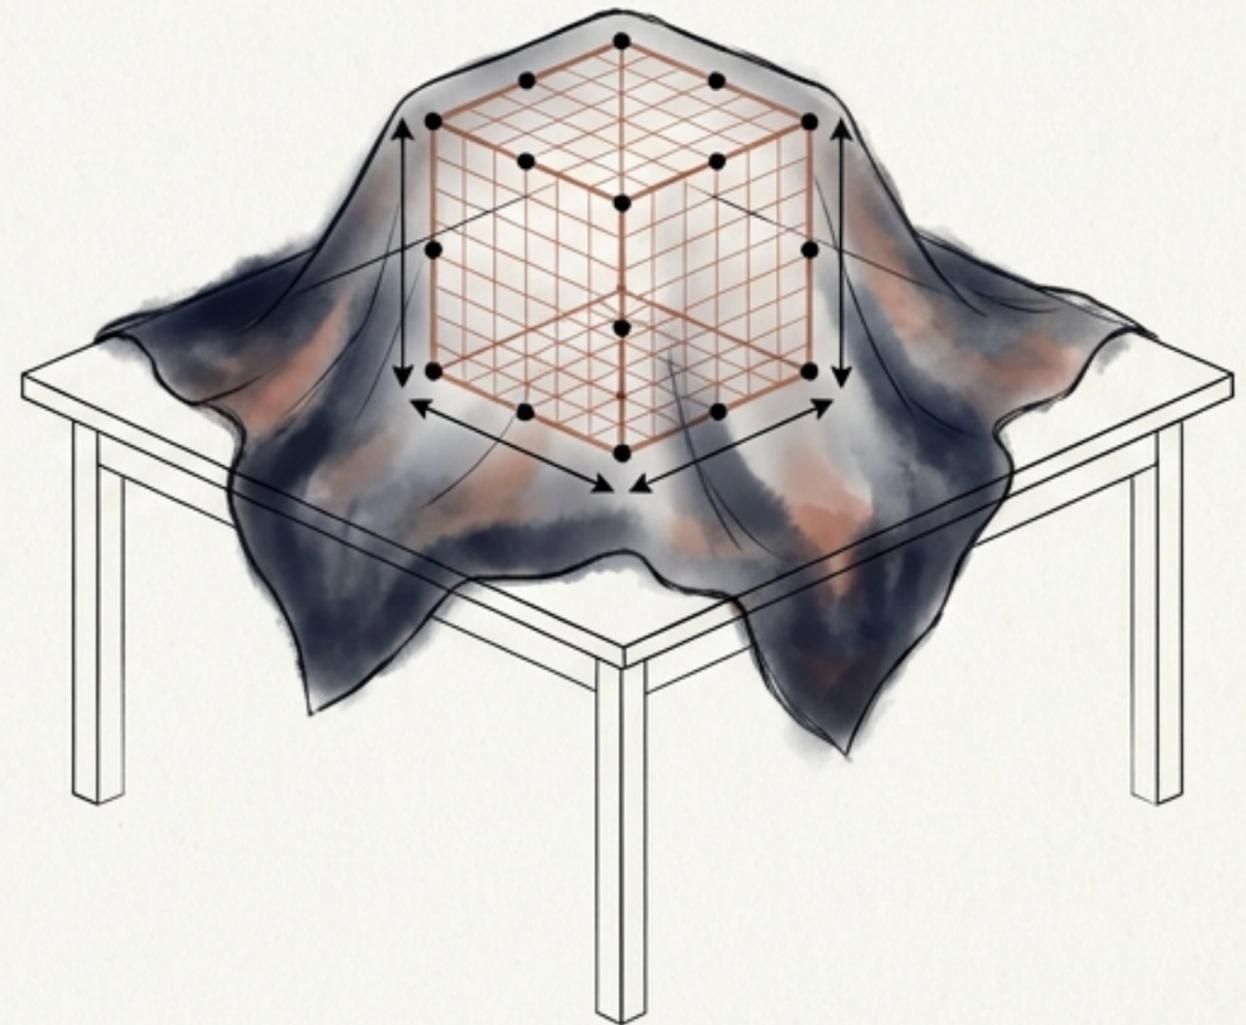

The Turning Point: Object Permanence

Panel A: Perception

Out of Sight = Non-Existent

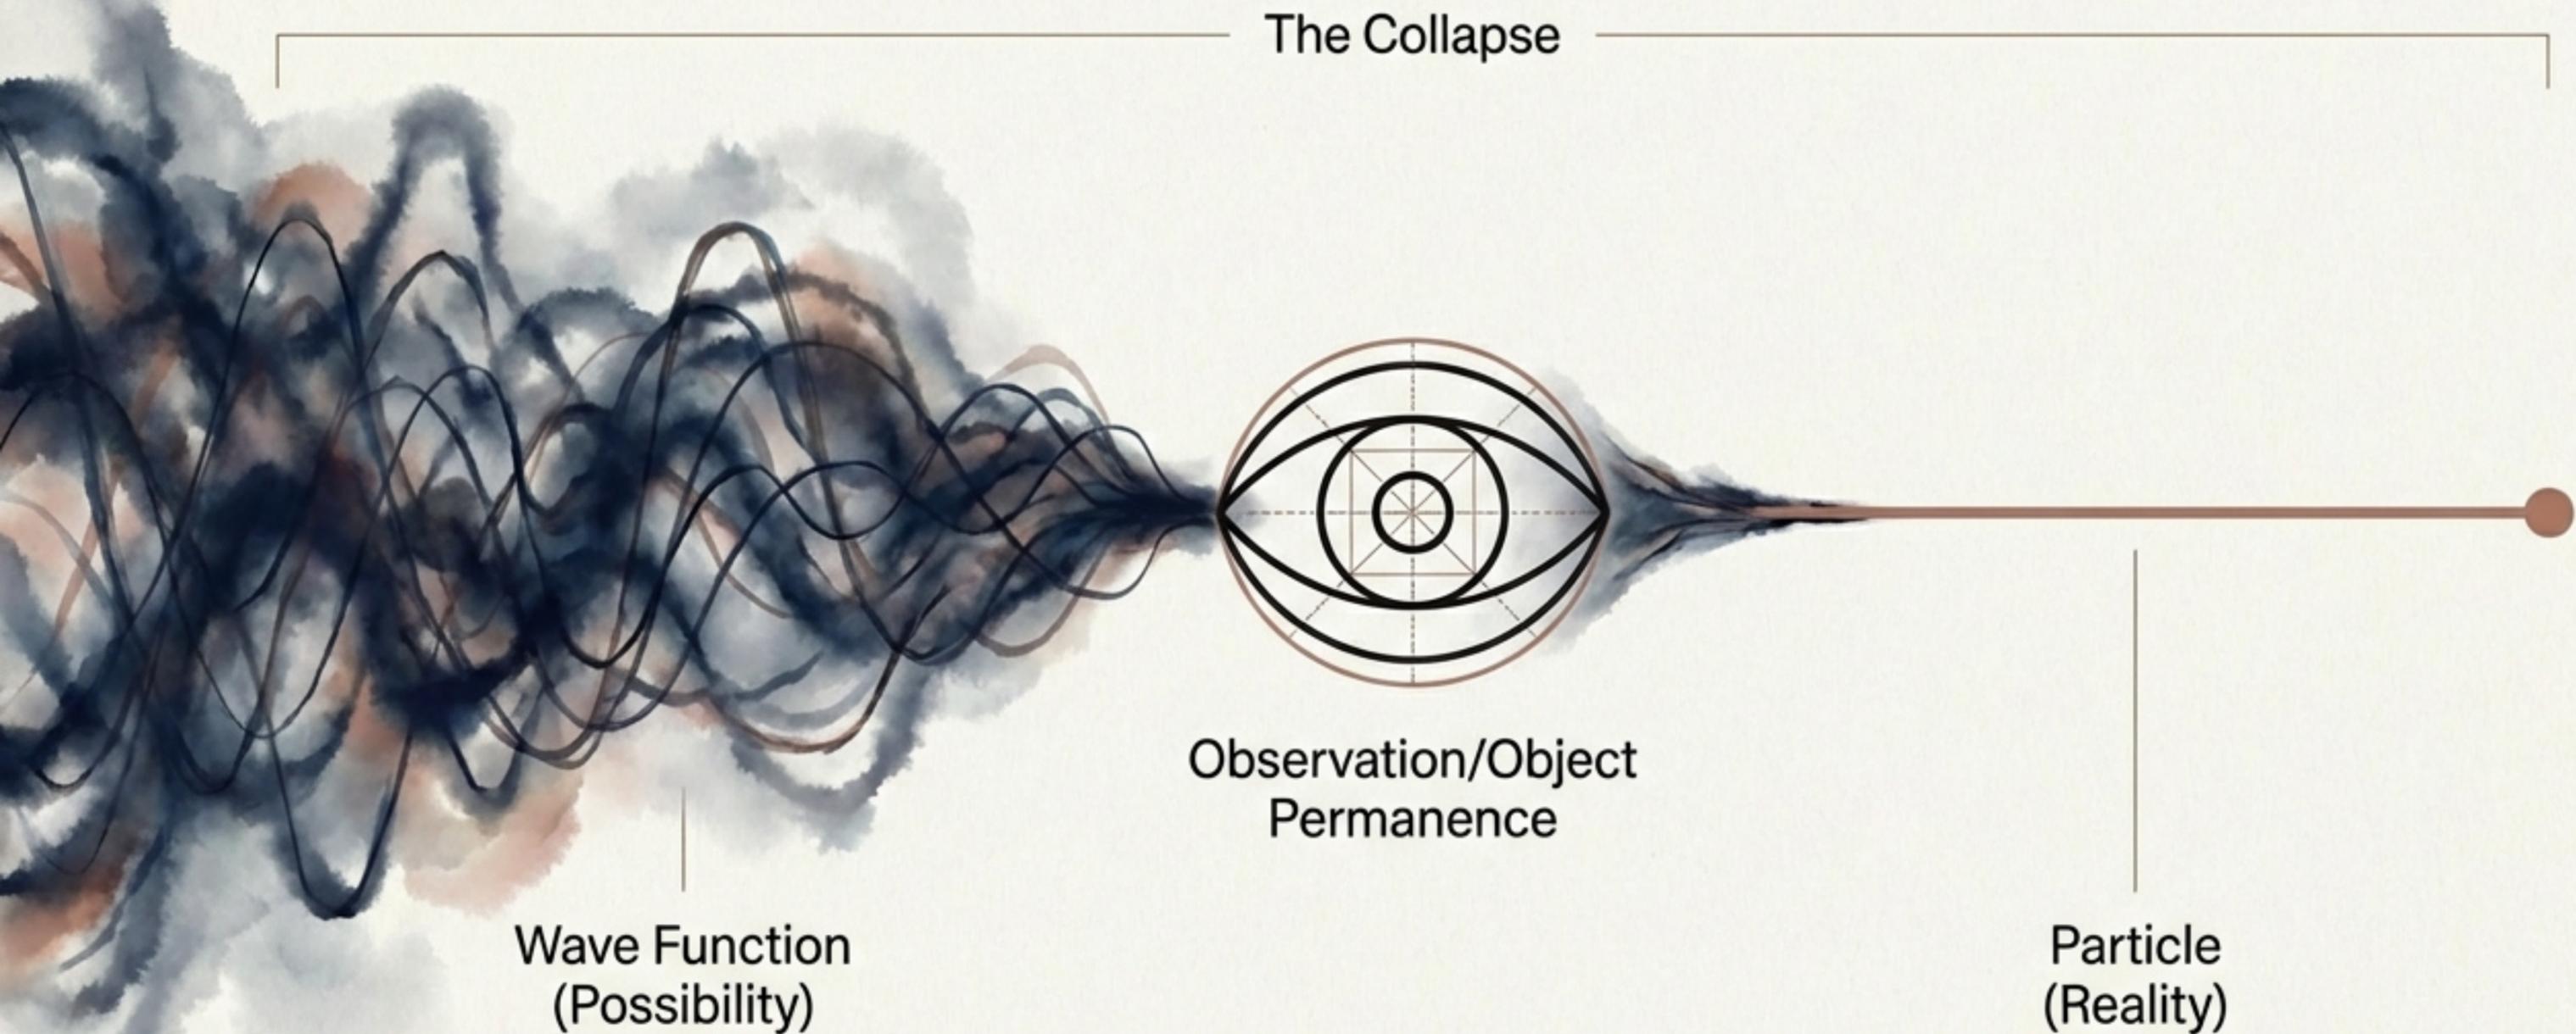

Panel B: Representation

Internal Representation

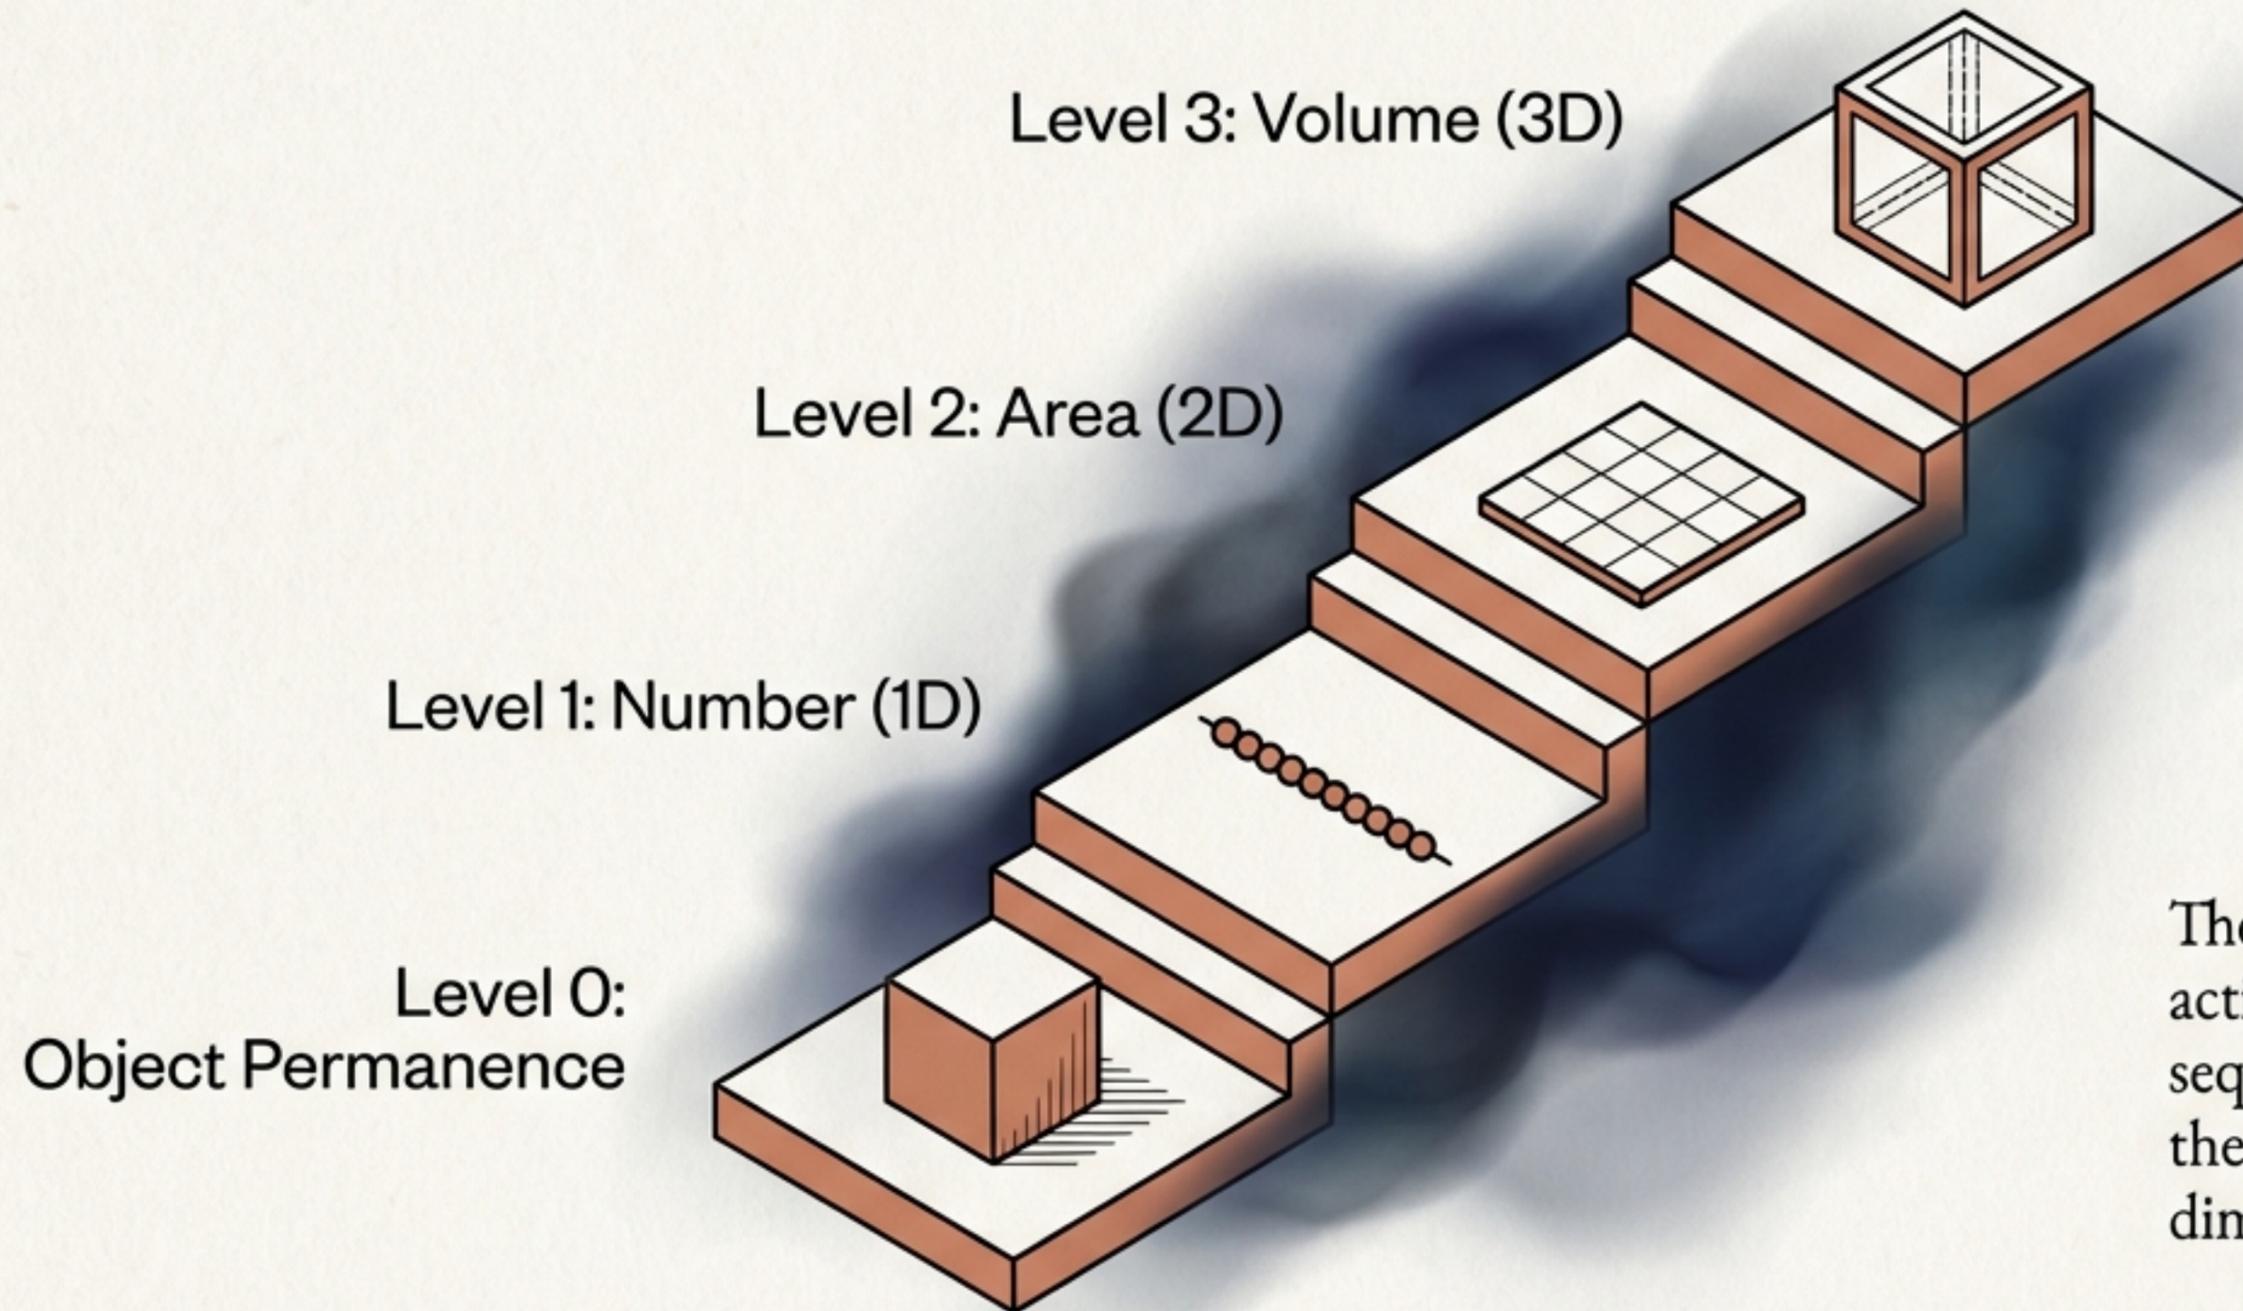

Occurring in the first year, this is the moment the “Life Arrow” begins. The child learns that objects exist even when unseen.

“The Quantum Connection” in Founders Grotesk

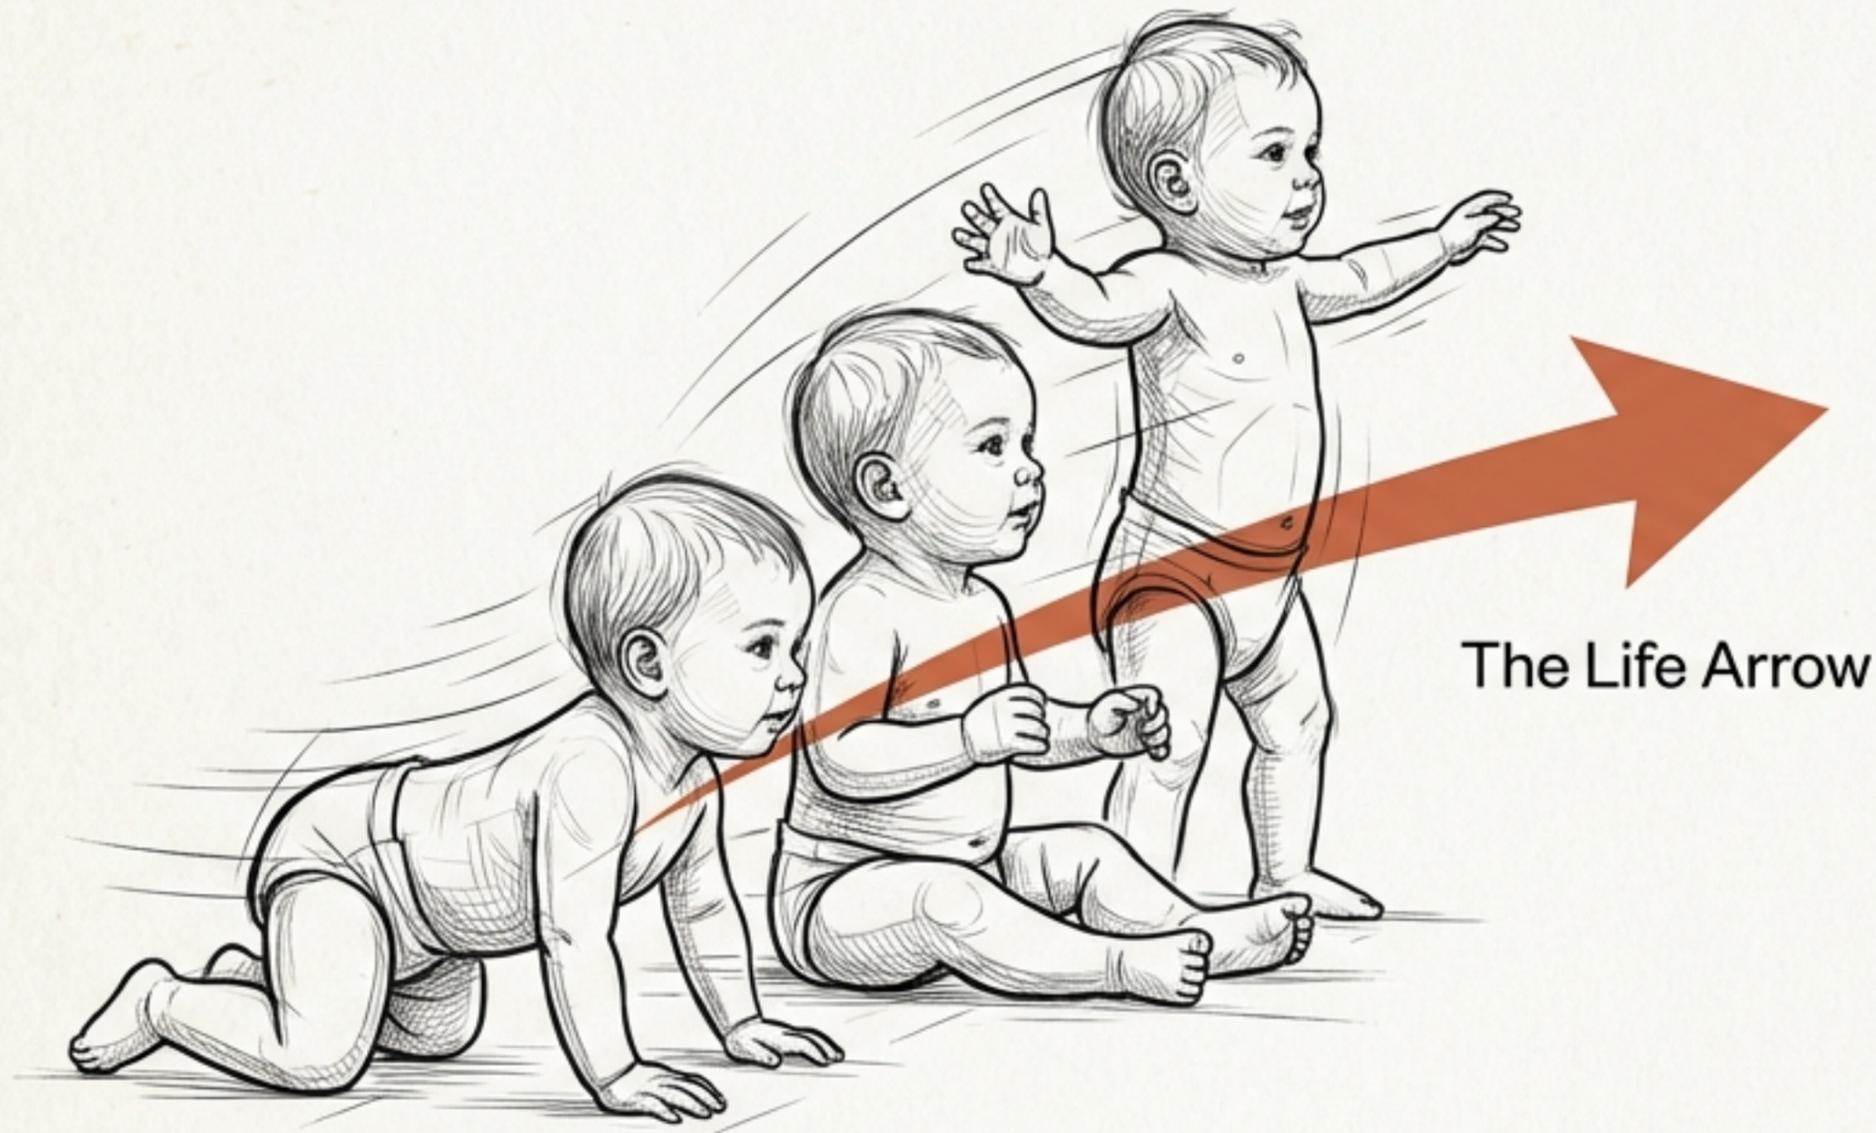

The Synthesis: Object Permanence acts as the Wave Function Collapse. It forces the chaotic, non-deterministic world of quantum possibility into a single, deterministic state of reality.

The Dimensional Ladder

The Spatial Acquisition Device activates through this invariant sequence. A child must master the conservation of each dimension to build the next.

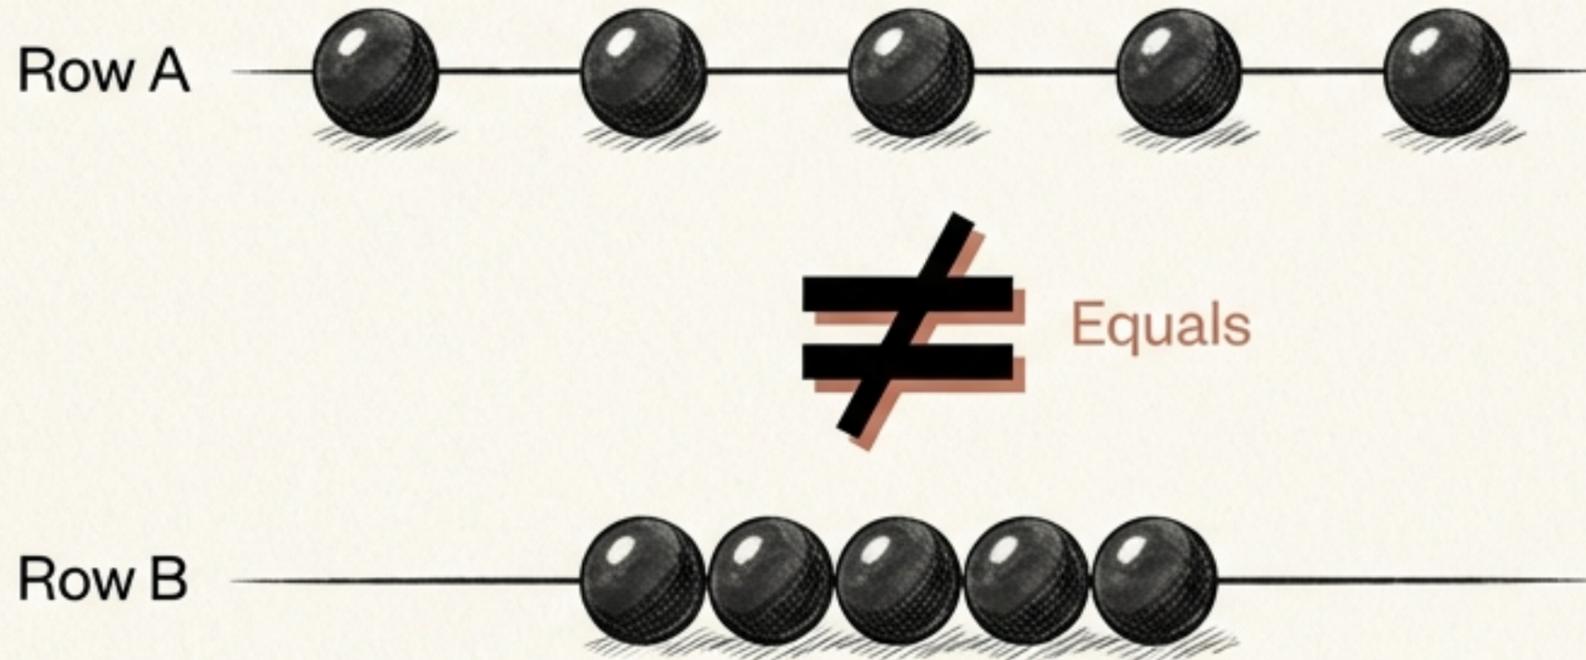

Level 0: Sensori-Motor (Birth - 2 Years)

**Physical Existence
Established**

Garamond Premier Pro
The child learns through movement. Before cognitive dimensions, they experience physical dimensions. This stage establishes the permanent existence of the self and the object.

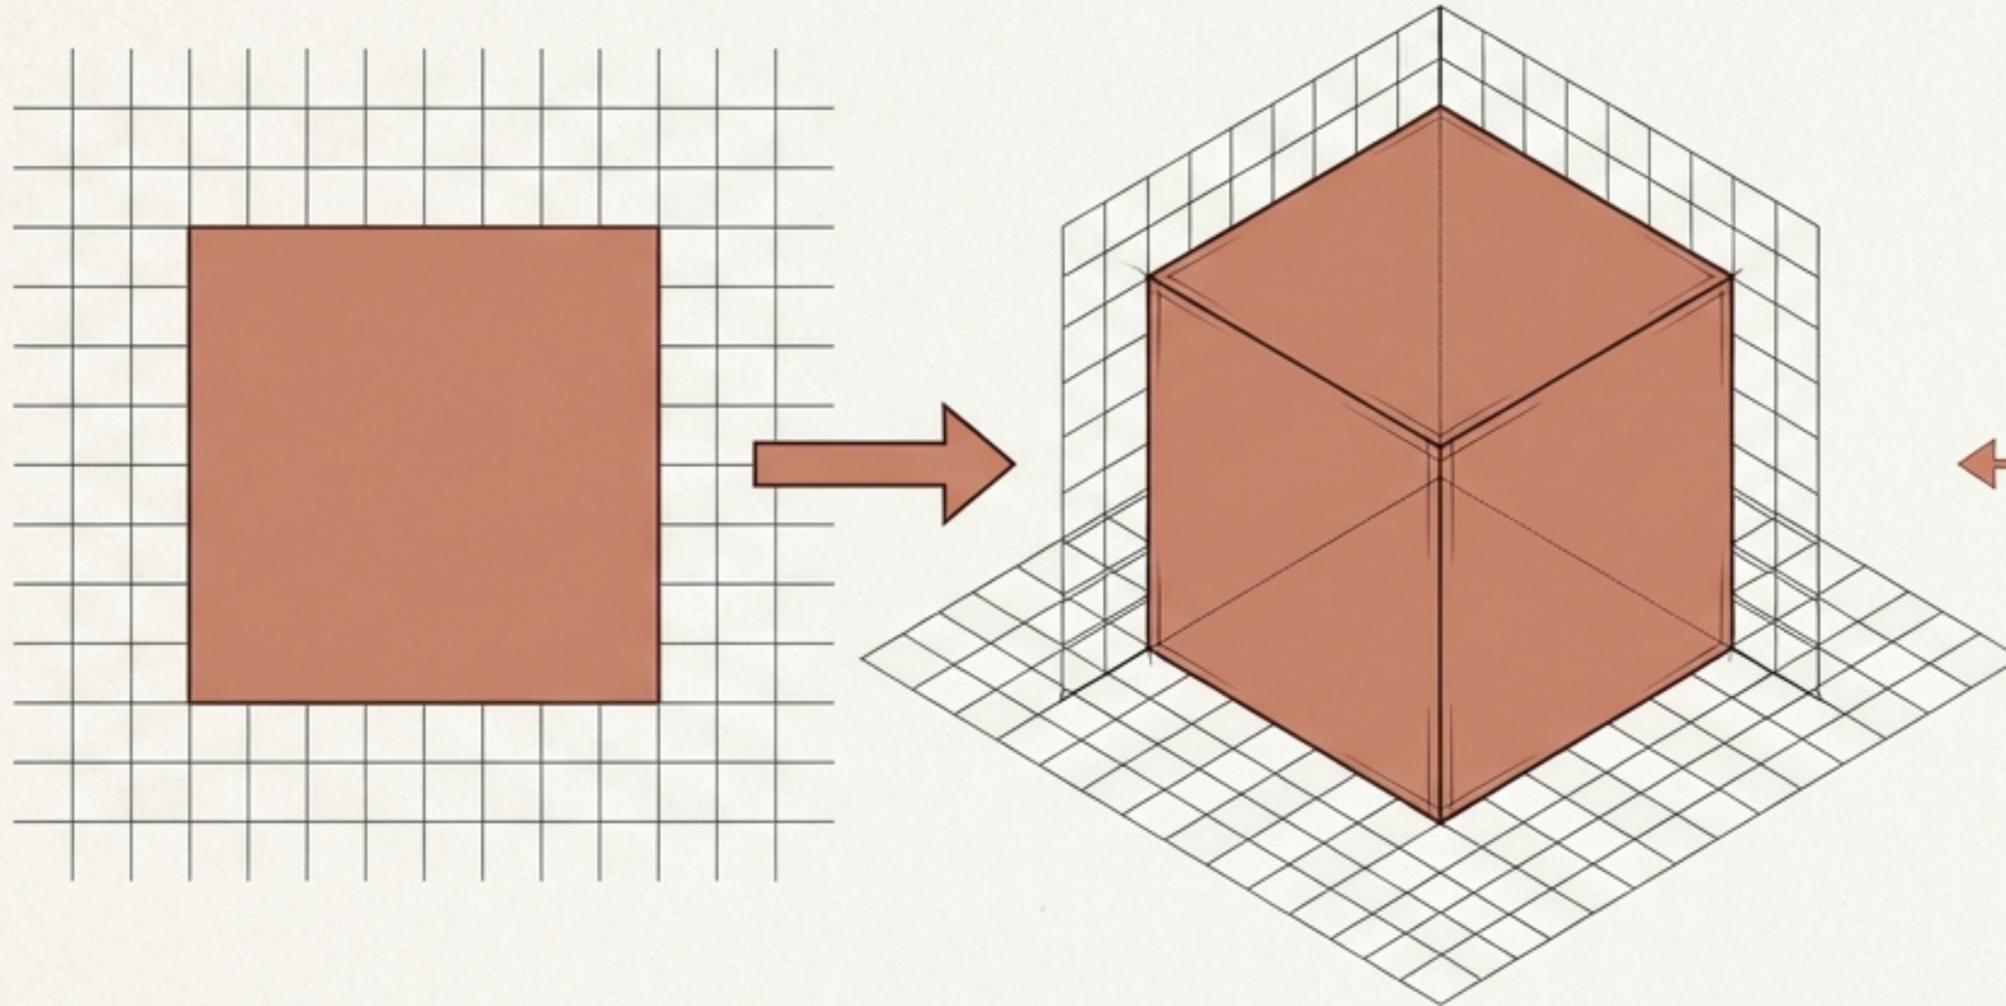

Level 1: Pre-Operational (2 - 7 Years)

The beginning of Logic over Perception. The child internalizes that space does not change quantity.

One-Dimensional reality is secured. ←

Levels 2 & 3: Concrete Operational (7 - 11 Years)

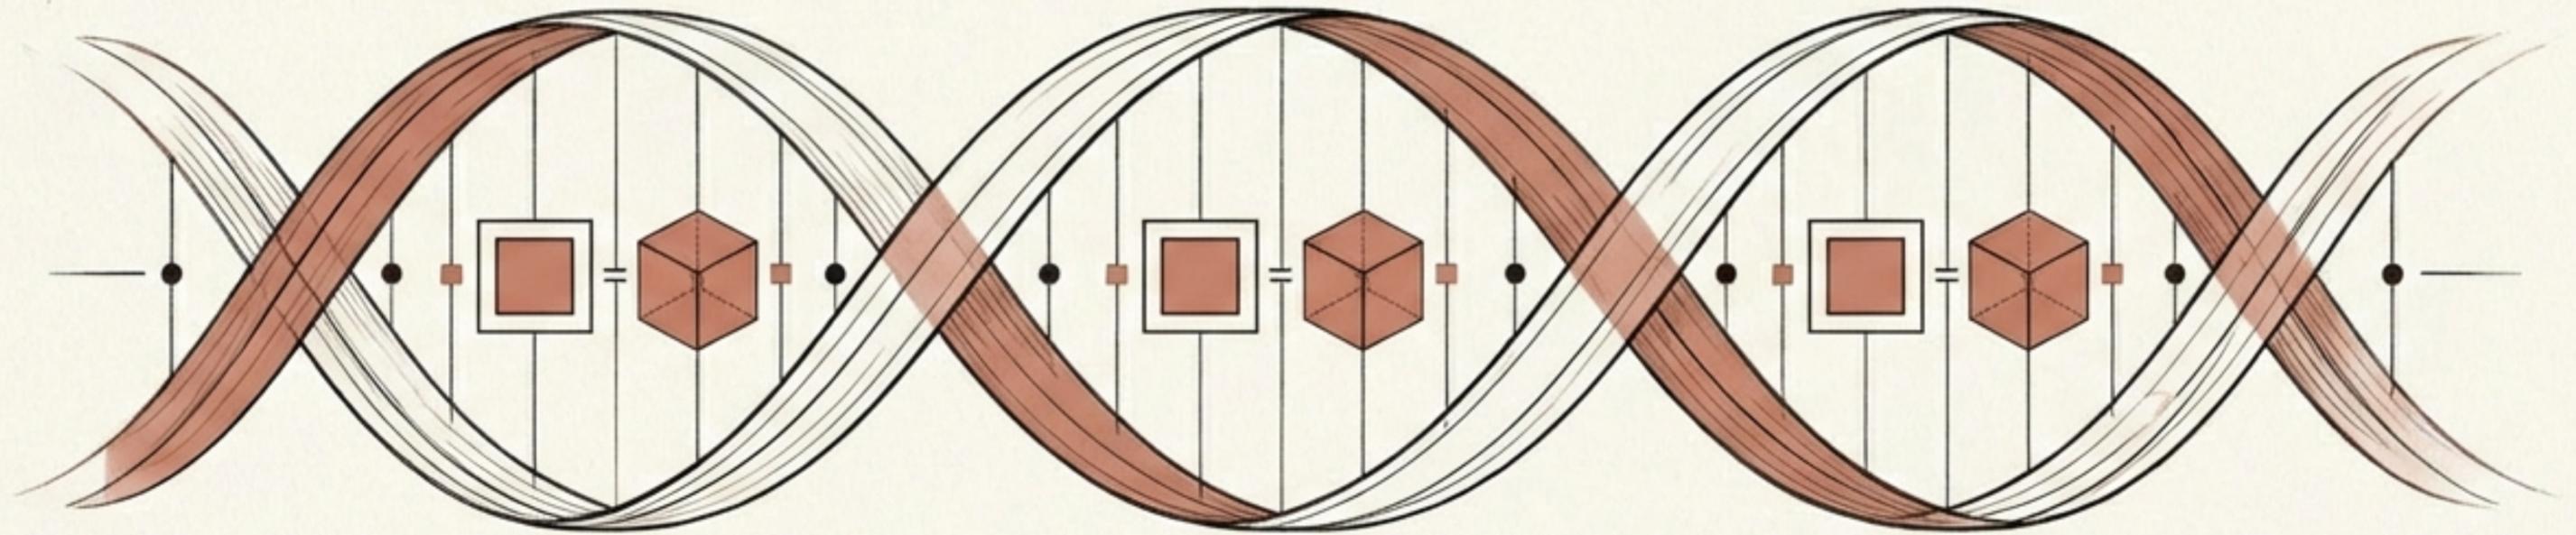

2D: Conservation of Area

3D: Conservation of Volume

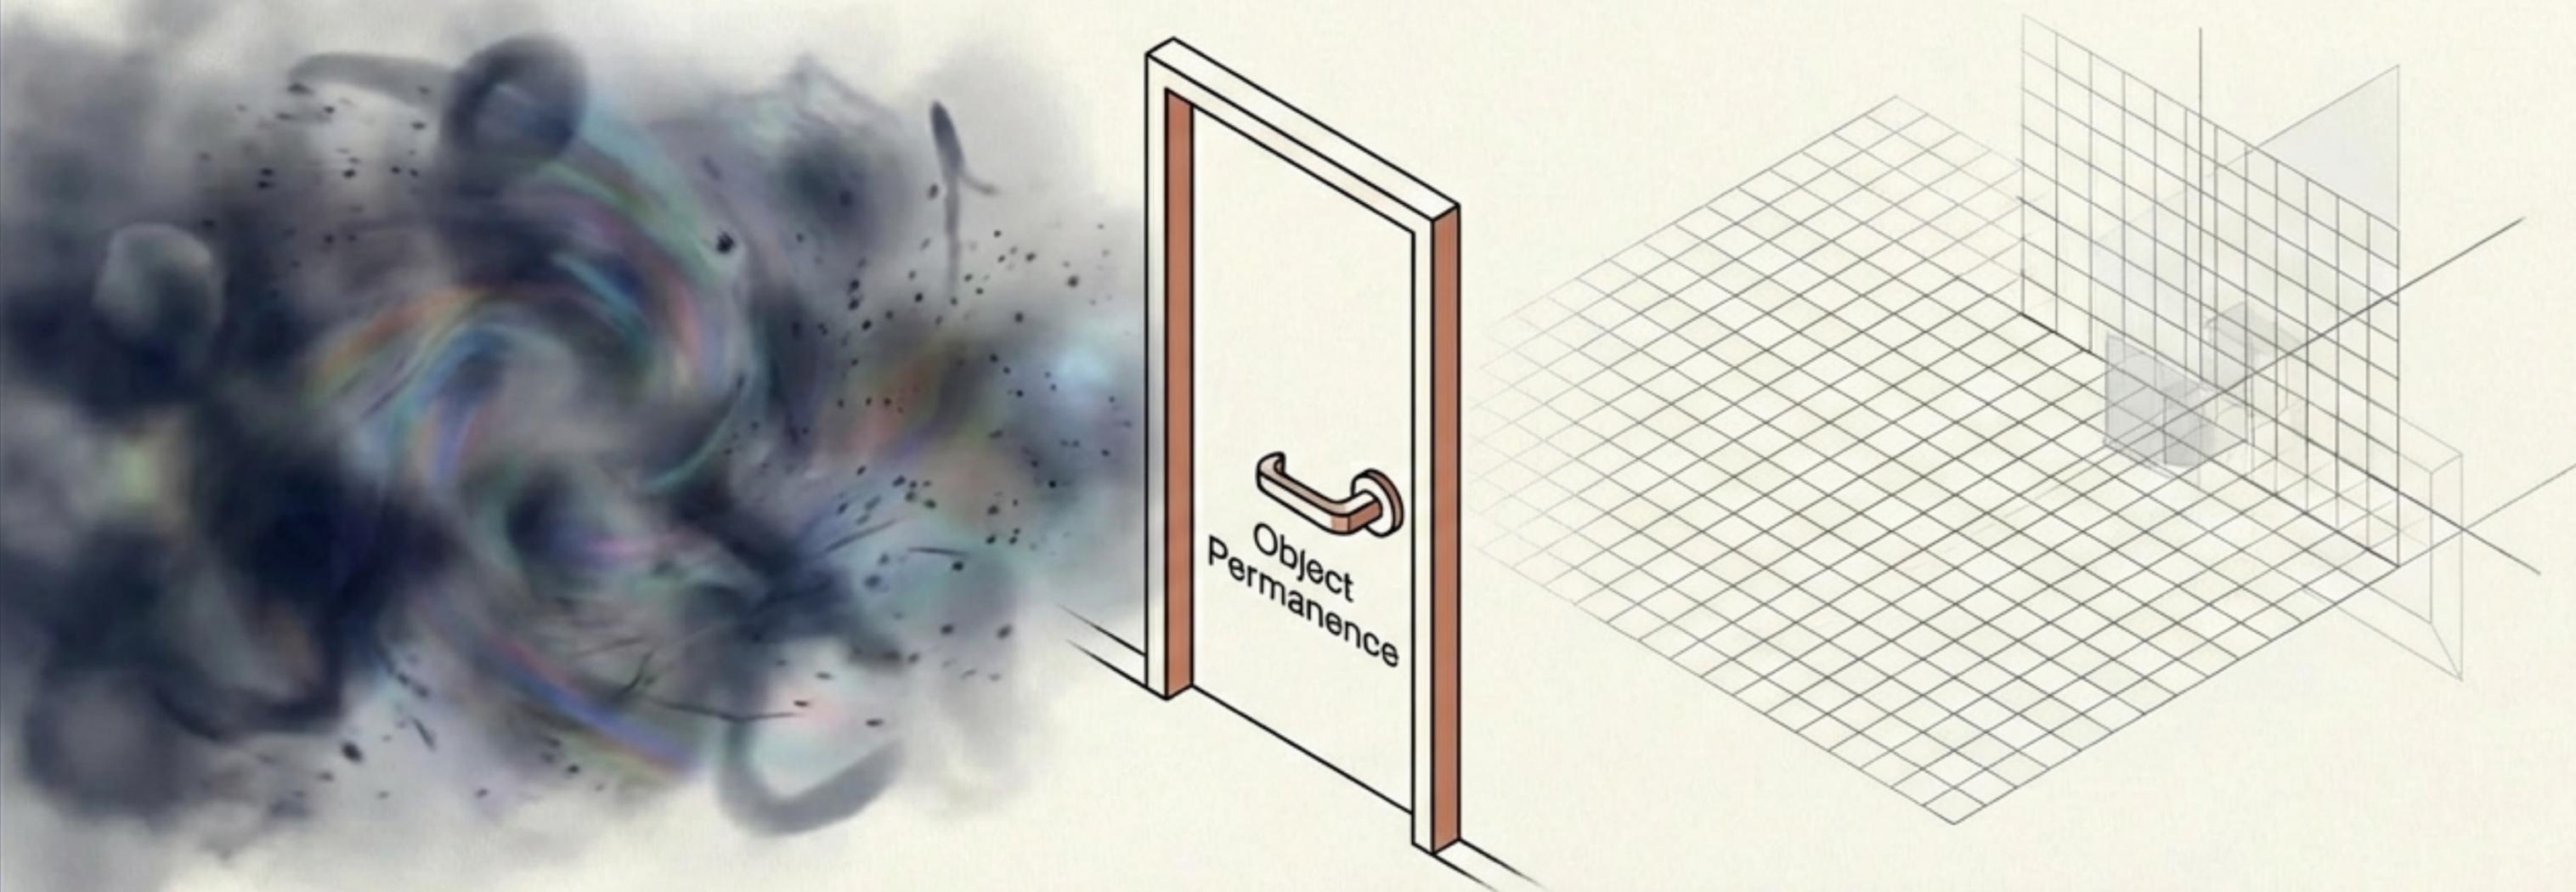

The journey completes. Once conservation of volume is internalized, the Spatial Acquisition Device is fully online. The child now inhabits a deterministic, Newtonian world.

The Invariance of the Device

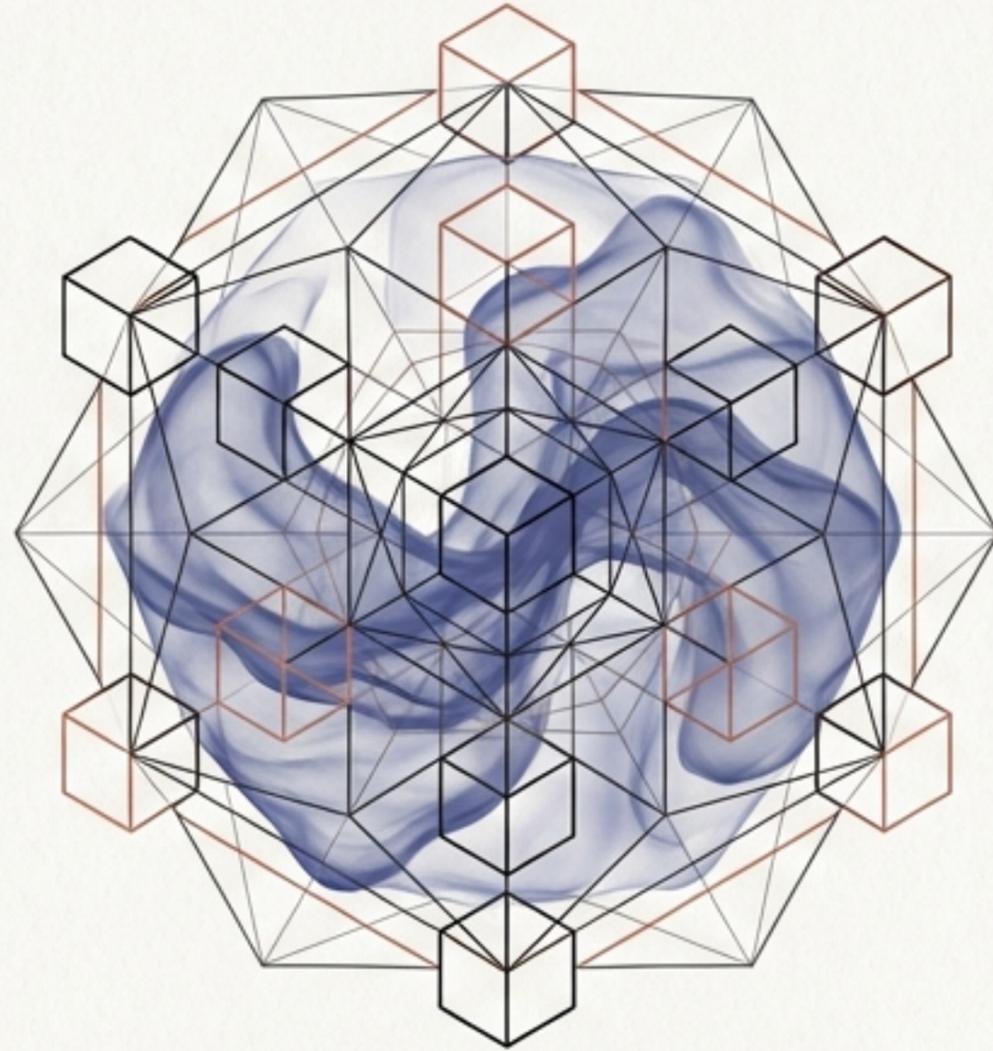

While the age of acquisition varies, the sequence is invariant. No child skips a step. This suggests a biological imperative—we are ‘pre-wired’ to construct a 3D reality.

The Deterministic Switch

Theoretical Implication: Is the Spatial Acquisition Device the filter that moves consciousness from a non-deterministic quantum world to a deterministic relativistic world?

Synthesis: The Architect of Experience

Founders Grotesk
Bohm: Mind and Matter
emerge from the Implicate
Order.

Founders Grotesk
Piaget: Reality is con-
structed through invariant
dimensional stages.
