Identifying Key Indicators for Facility Compliance

A Supplementary Analysis of the 2018/19 Fiene Coefficients for Childcare and Residential Care.

Prepared By: Population Health Observatory
Prepared For: Health Protection Directorate
Date of Synthesis: January 23, 2020
January 23, 2020

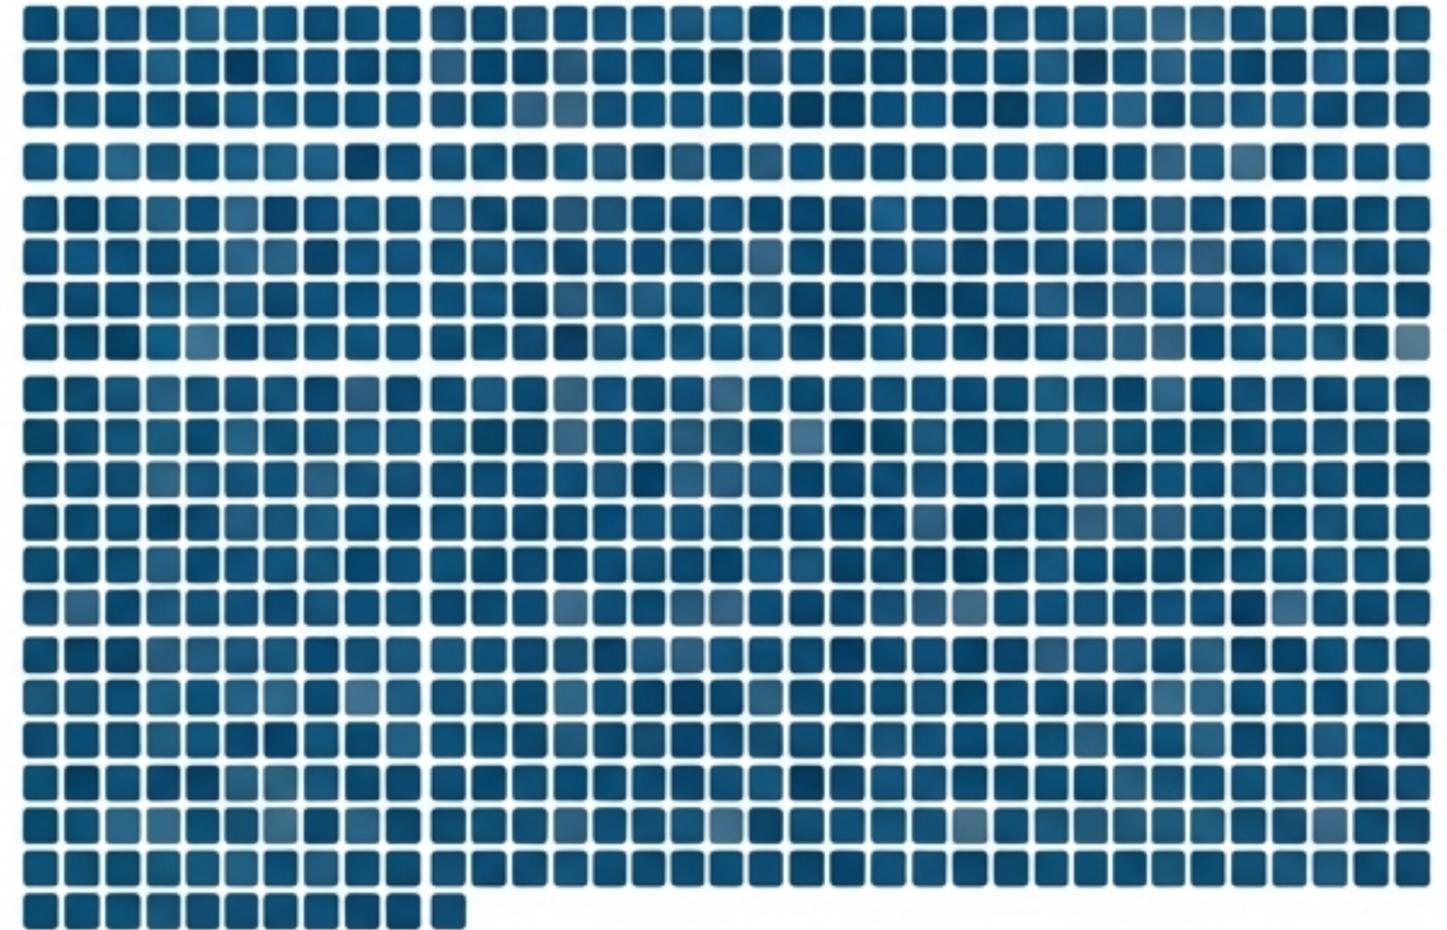

The Monitoring Challenge: Signal vs. Noise

Childcare Facilities

271 Applicable Regulations

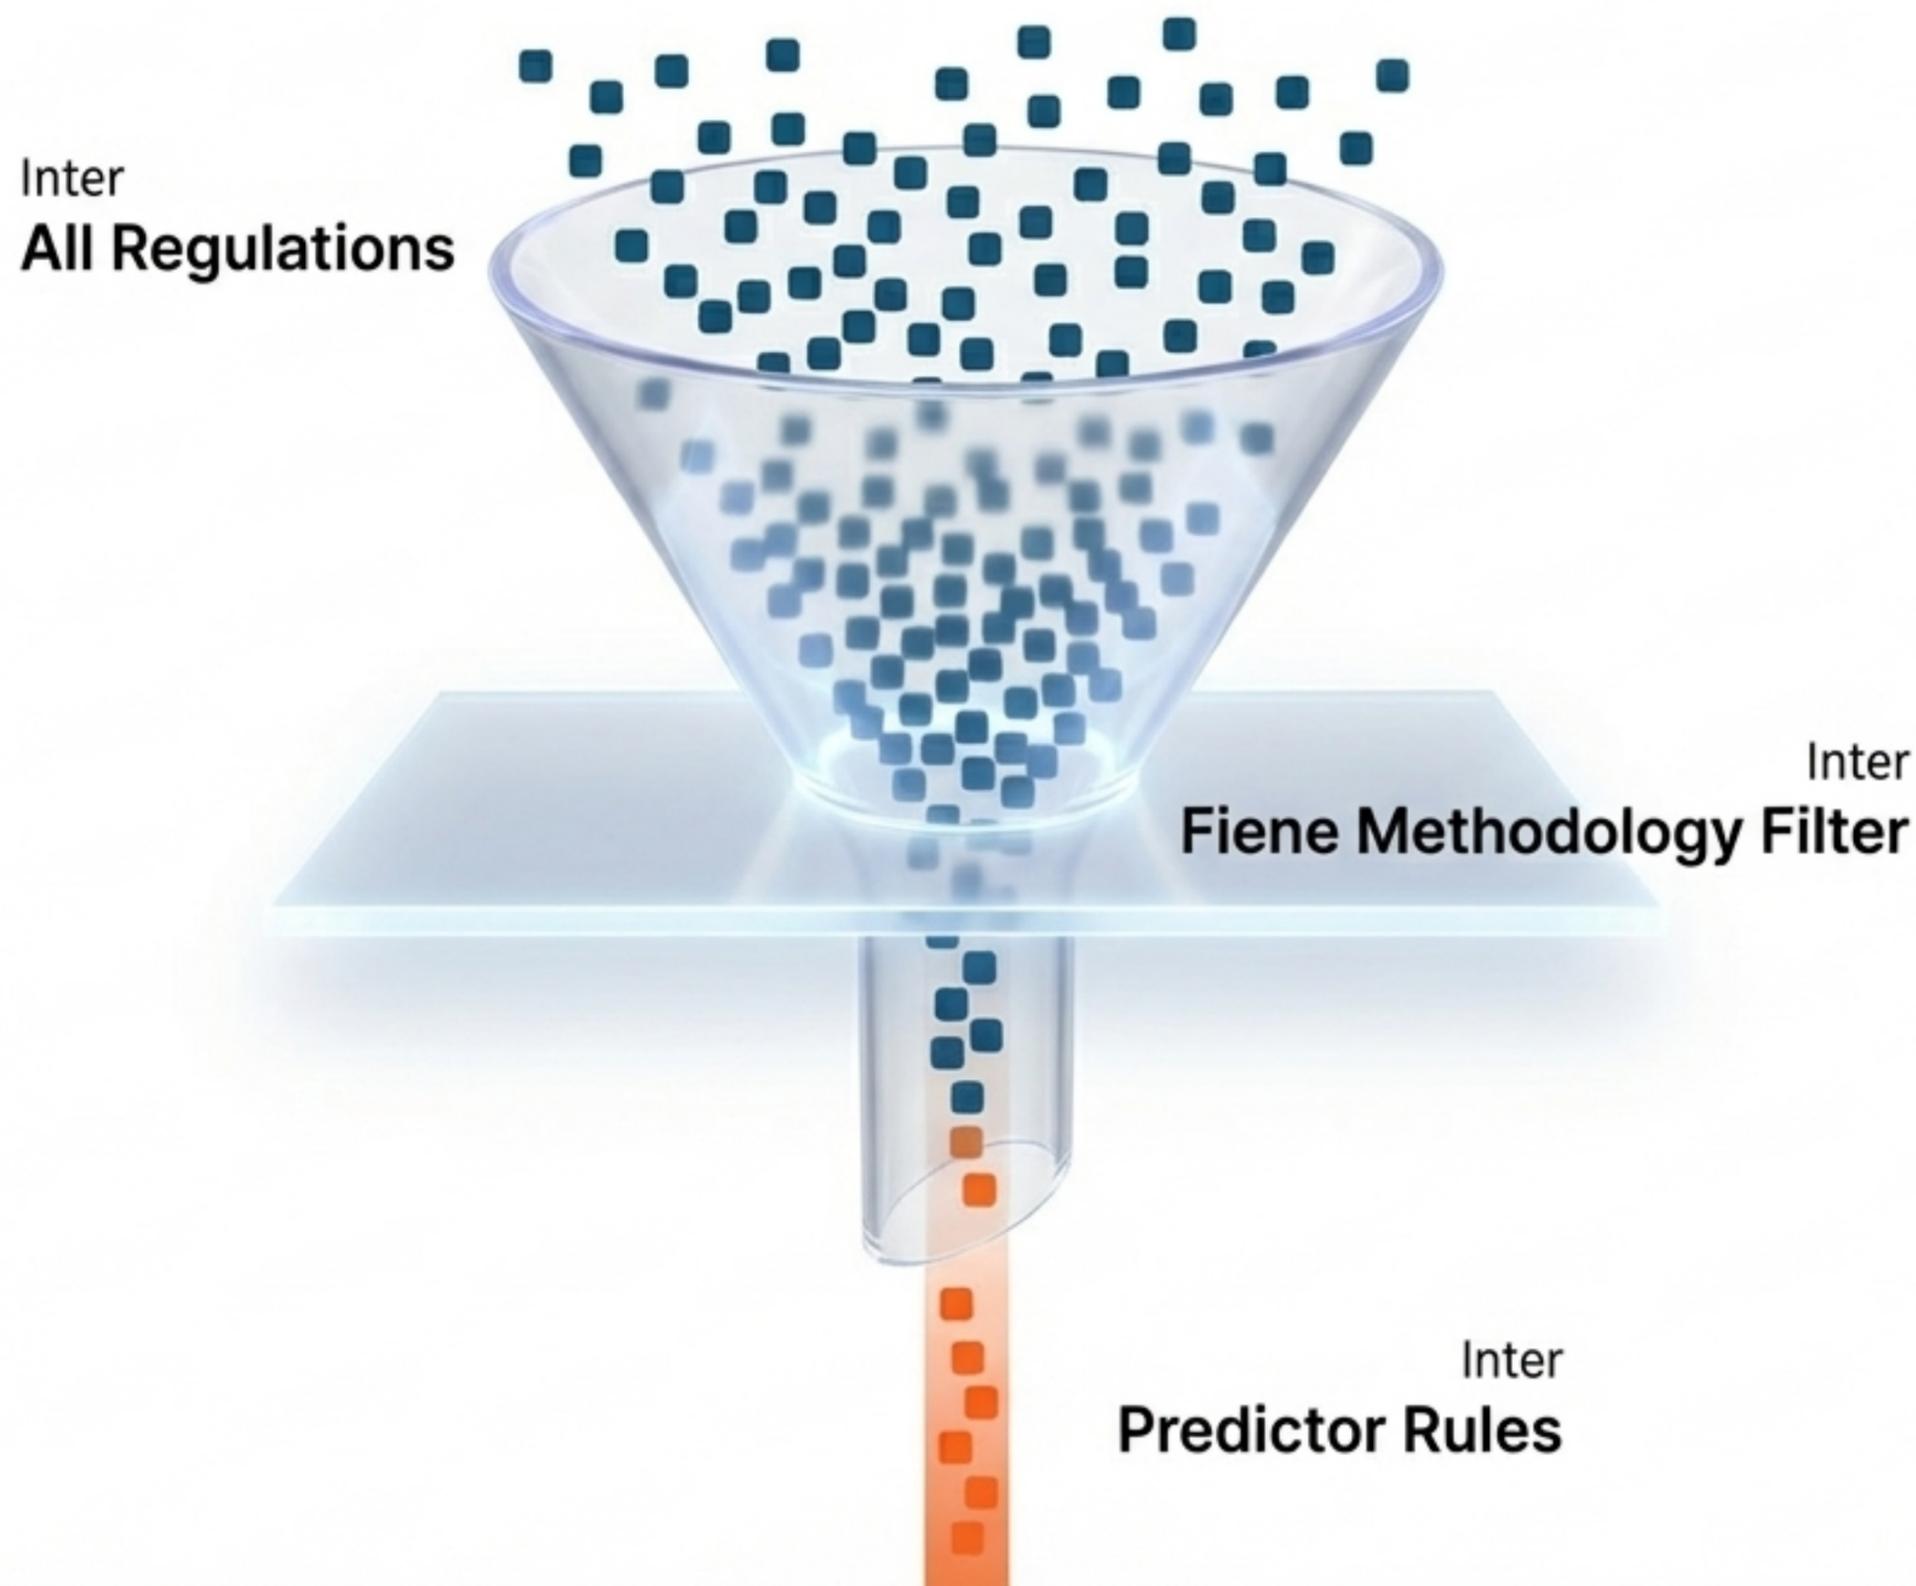

Residential Facilities

473 Applicable Regulations

How does the Health Protection department efficiently track overall safety and compliance across hundreds of disparate rules?

The Solution: Differential Monitoring via Fiene Indicators

Inter

What is a Key Indicator?

Source Sans Pro

Statistically, they are predictor rules of overall compliance with all rules for a particular service type.

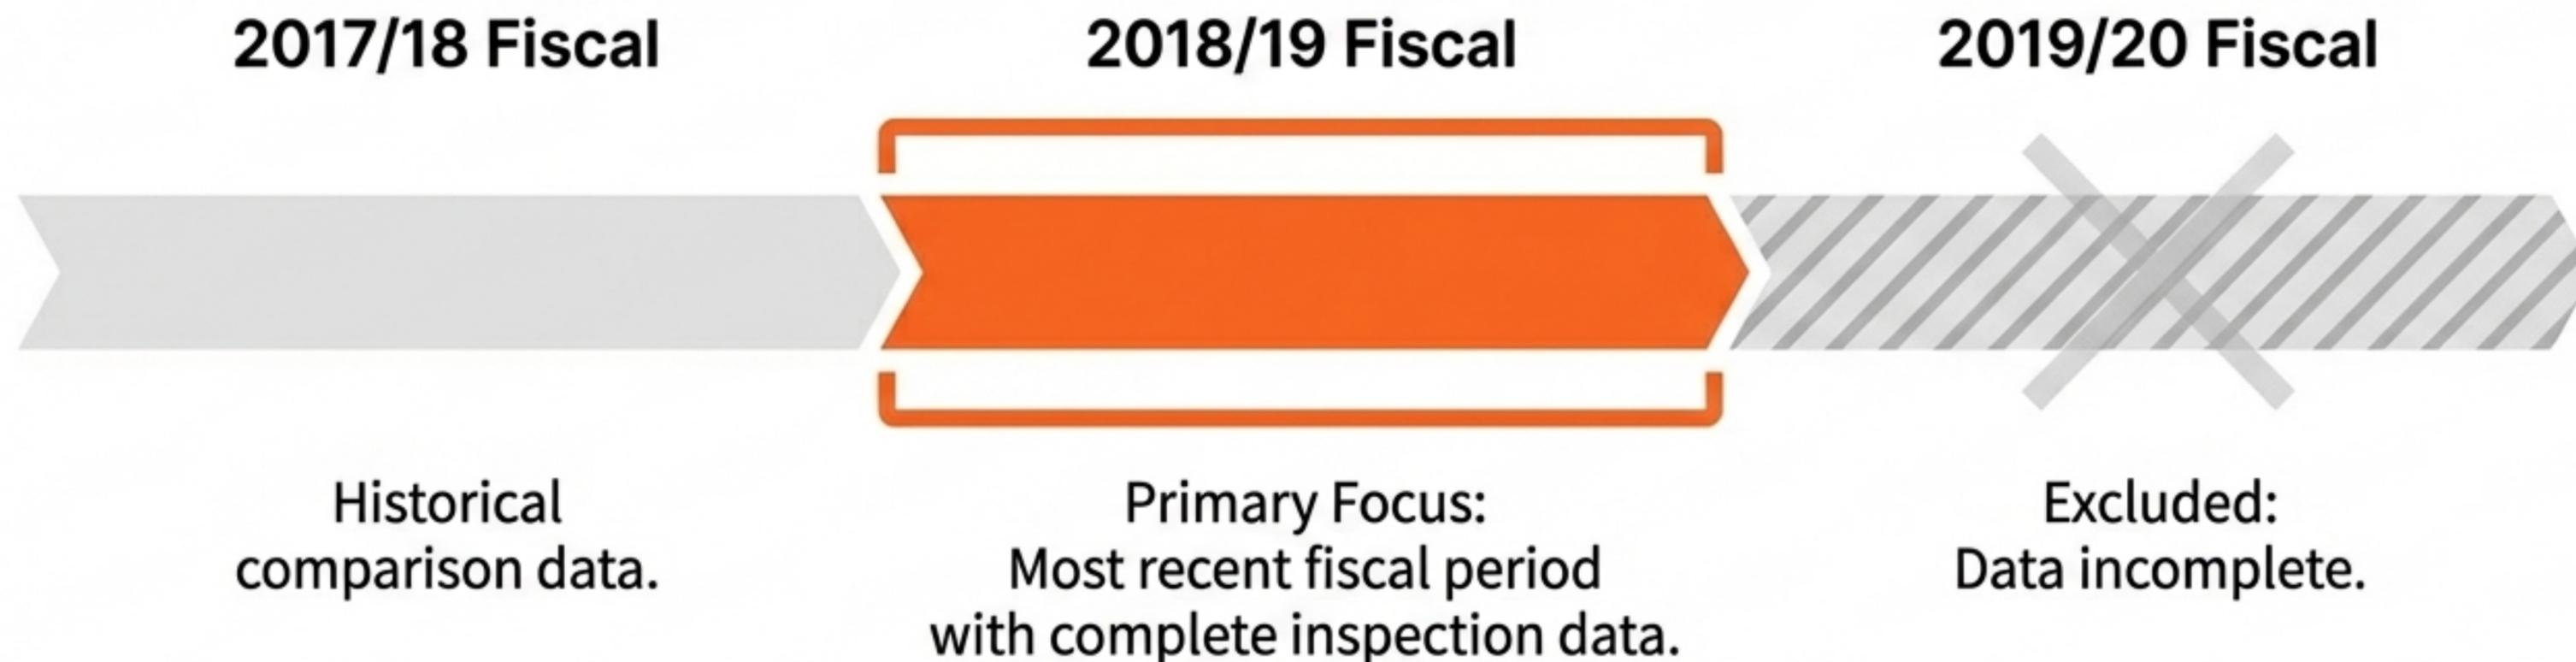

Inter

The Operational Value

Source Sans Pro

This differential monitoring approach predicts overall facility safety by tracking only the most statistically significant indicators, drastically optimizing inspection efficiency.

Project Scope and Data Extraction Parameters

Extraction Details

- Source: Healthspace Extract
- Date Range: April 1, 2018 – January 13, 2020

Diagnostic Matrix: Selecting the Inspection Variable

First Inspection

Definition: Source Sans Pro
Select only the first inspection
in the study period.

Rationale: Source Sans Pro
Replicates the 2017
methodology; provides a pure,
cross-sectional picture of
compliance at the inspection
level.

Selected Approach

Most Violations

Definition: Source Sans Pro
Select only the inspection
with the most violations.

Rationale: Source Sans Pro
Mitigates bias and maintains
independent observations, but
focuses only on worst-case
instances.

Inspections Combined

Definition: Source Sans Pro
Combine all violations across
all inspections.

Risk: Source Sans Pro
Introduces heavy selection bias.
Facilities with more frequent
inspections naturally accrue more
violations, artificially lowering
their compliance ranking.

To ensure cross-sectional accuracy and consistency with 2017 data, the First Inspection methodology was strictly applied.

Visualizing the First Inspection Rule in Practice

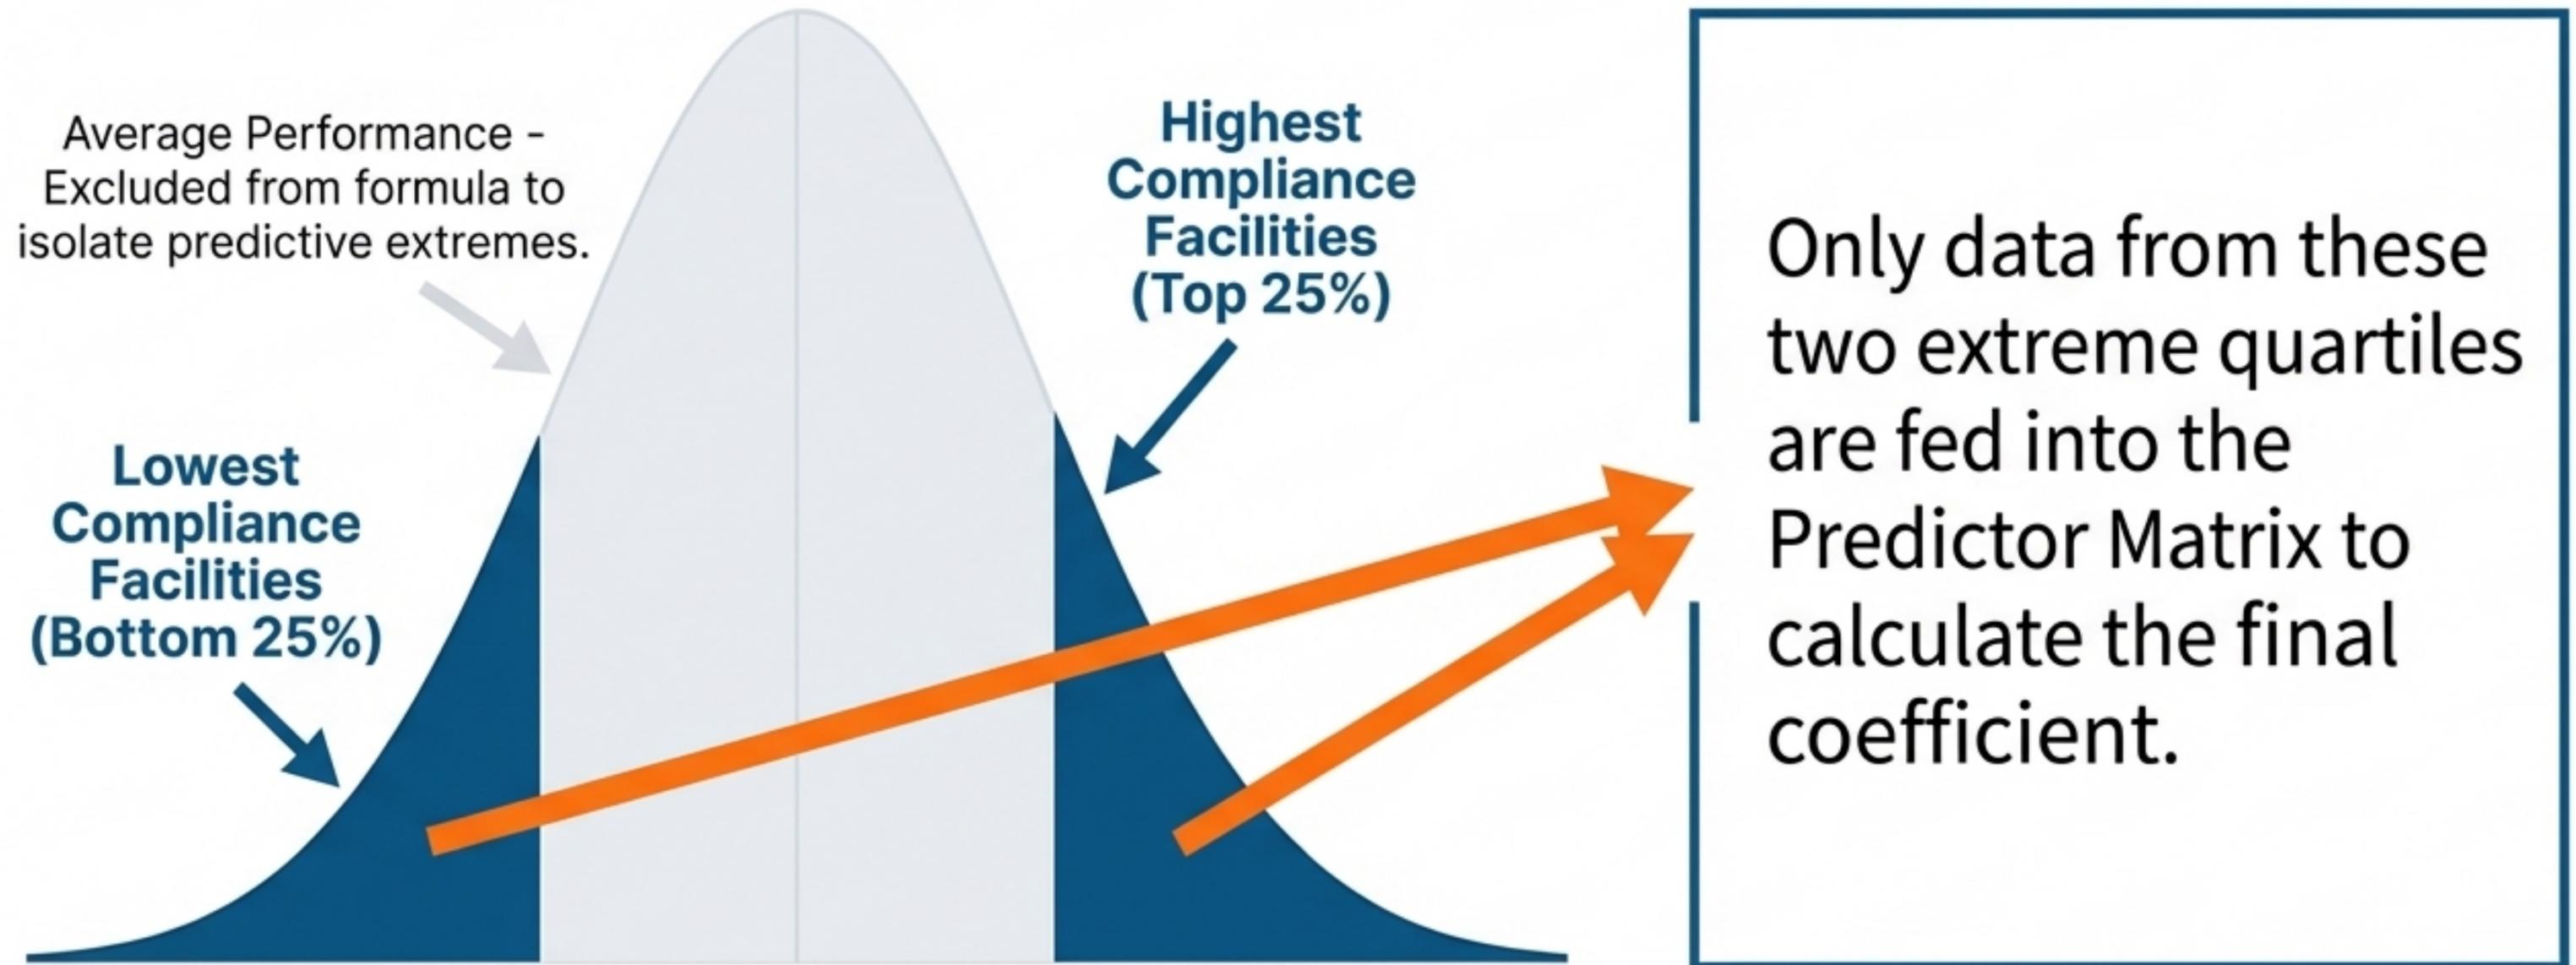

Sample Facility A

	Reg 1	Reg 2	Reg 3	Reg 4	Reg 5
Facility A	(Blank)	(X)	(Blank)	(X)	(Blank)

Edge Case Application:
If a facility had zero inspections in 2018/19, the very first inspection occurring in the subsequent fiscal period was utilized to prevent data gaps.

Defining the Extremes: Quartile Isolation

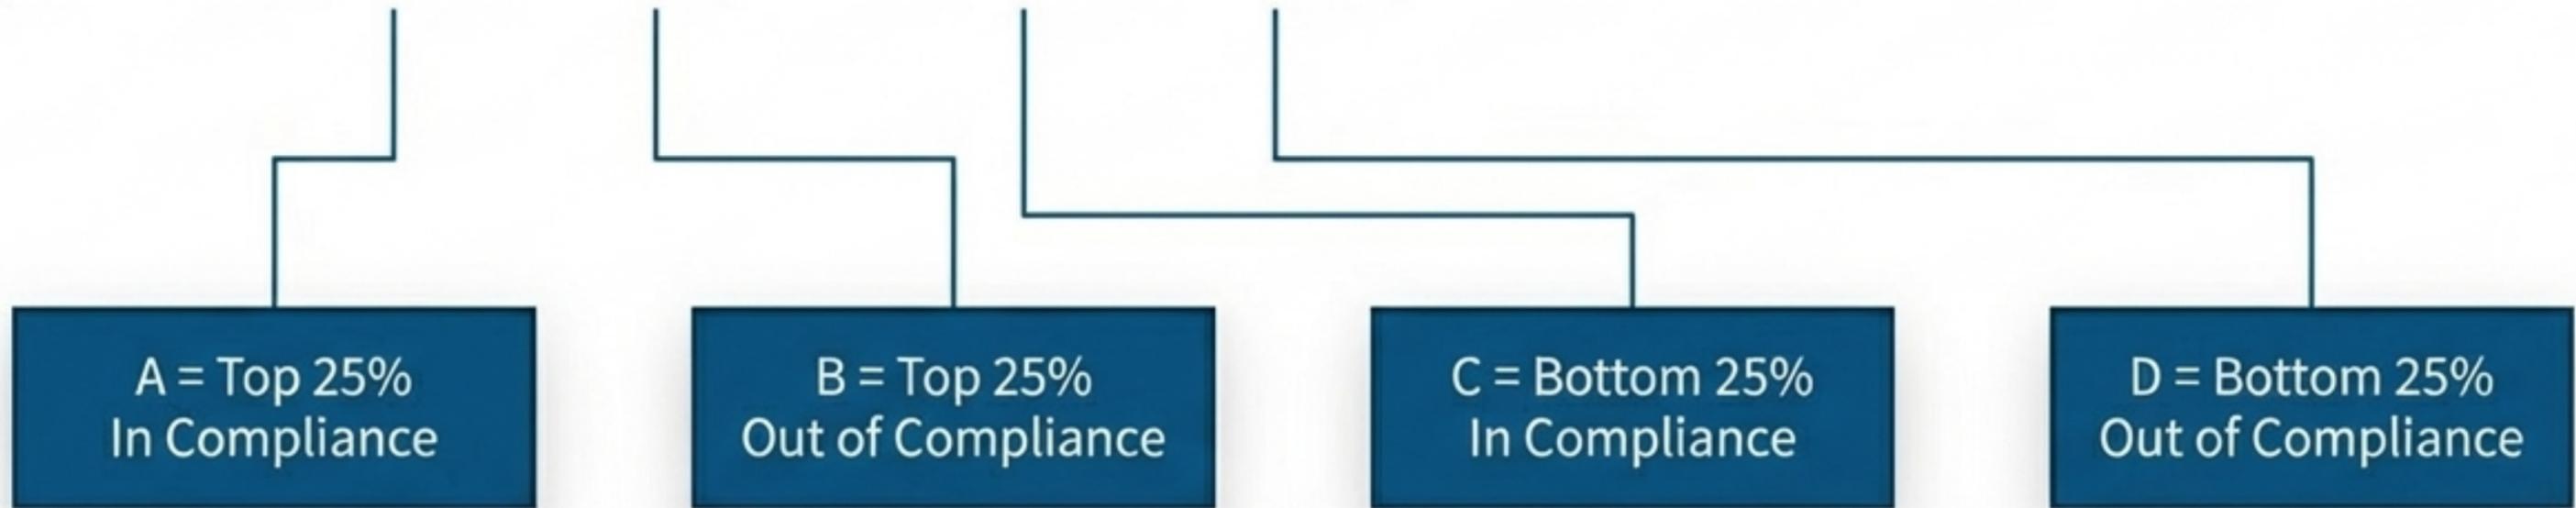

Step 1: The Predictor Matrix

	Providers In Compliance on Rule	Programs Out Of Compliance on Rule	Row Total
Highest level (top 20-25%)	A	B	Y
Lowest level (bottom 20-25%)	C	D	Z
Column Total	W	X	Grand Total

For every single regulation (all 249 tested), facilities are plotted into this matrix to determine if passing this specific rule correlates with being a high-performing facility overall.

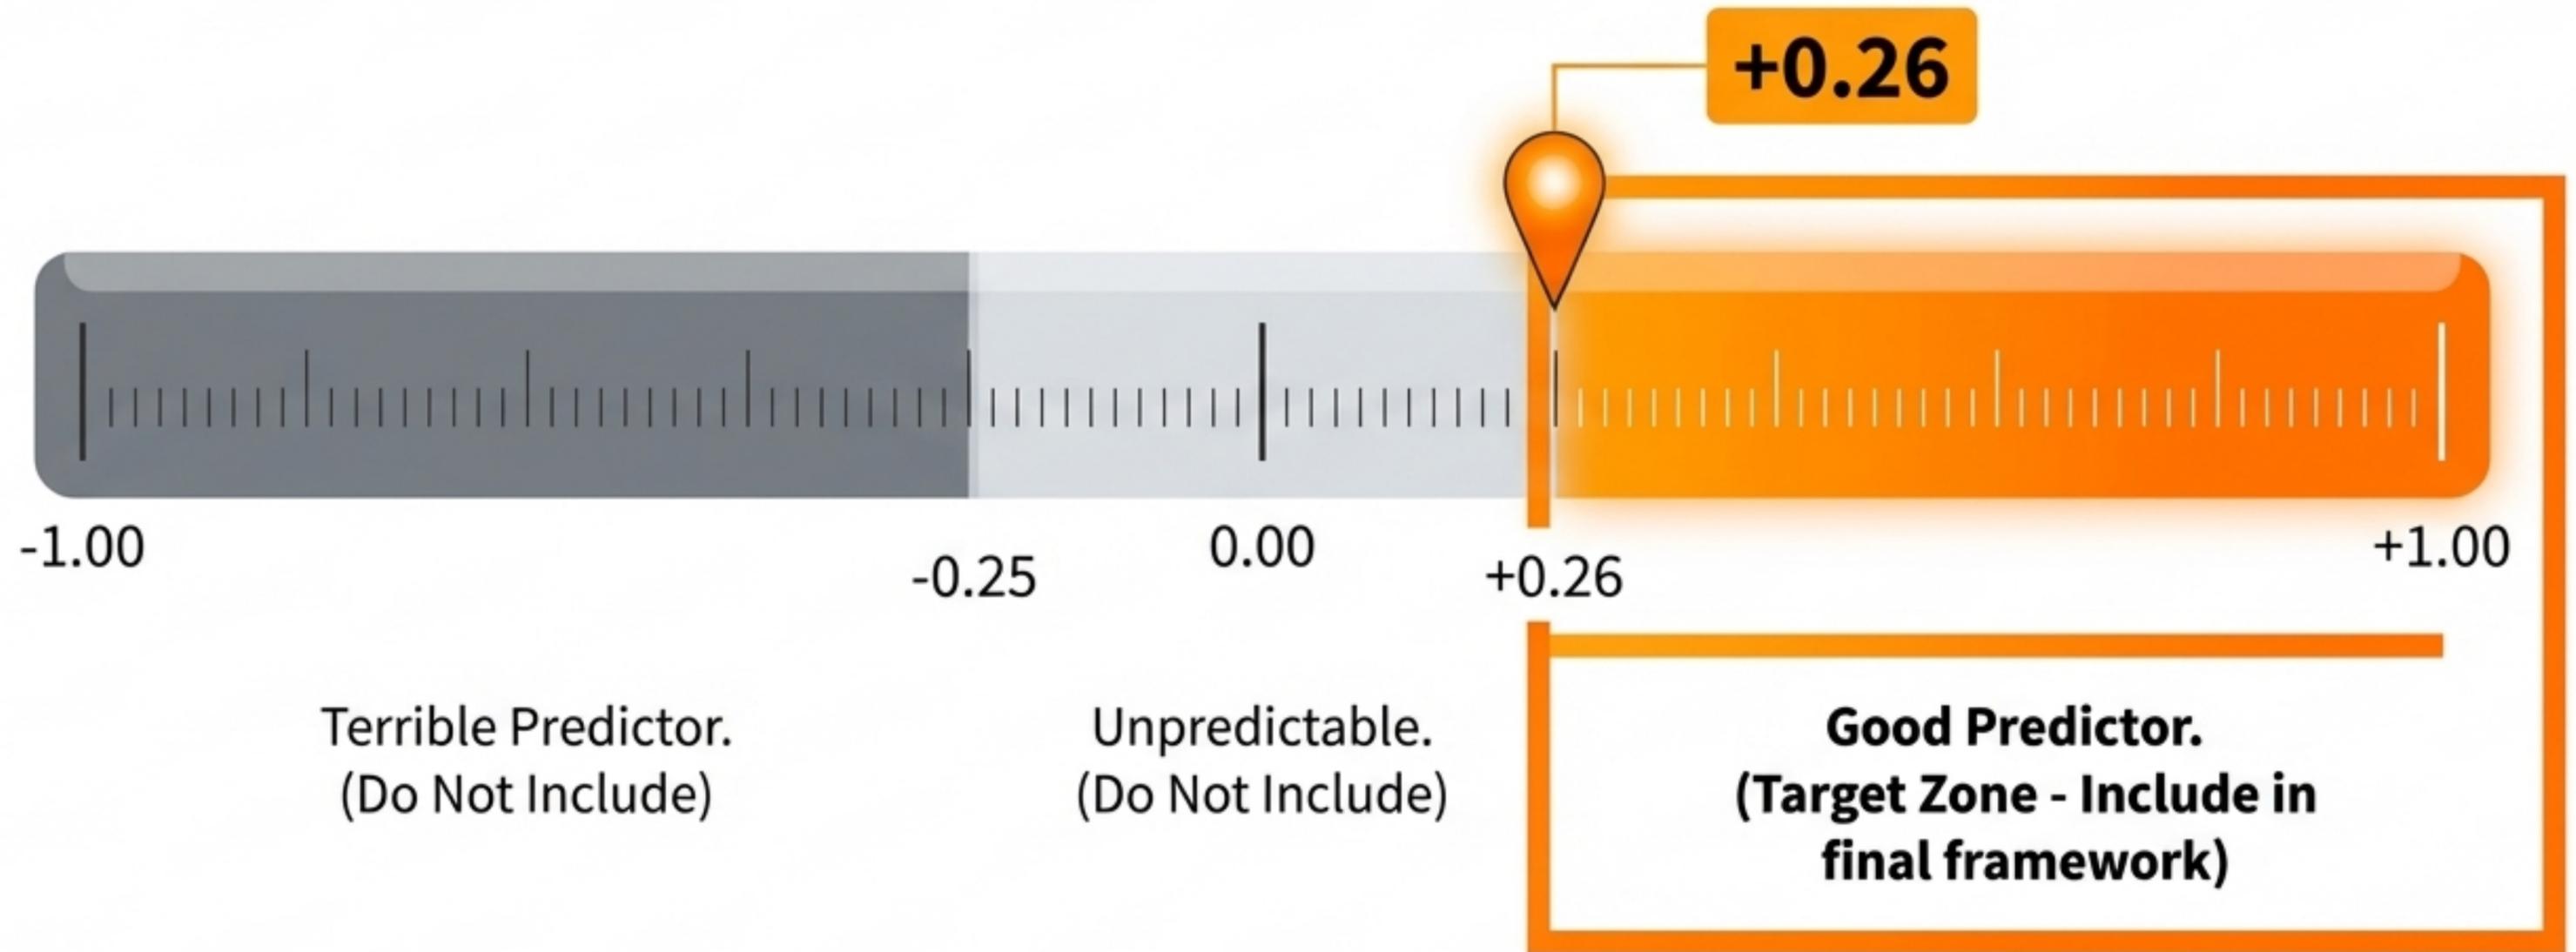

Step 2: The Fiene Coefficient Formula

$$\phi = ((A \times D) - (B \times C)) \div \sqrt{W \times X \times Y \times Z}$$

This calculation yields a single numerical coefficient (ϕ) for each regulation, representing its predictive strength.

Step 3: The Threshold for Success

The Final Yield: 2018/19 Target Indicators

By applying the 0.26 Fiene threshold, we have distilled hundreds of regulations down to a highly targeted, statistically validated list of 28 total indicators for differential monitoring.

Predictor Dashboard: Childcare Facilities

The Stable Core (Common across 2014, 2017, 2018)

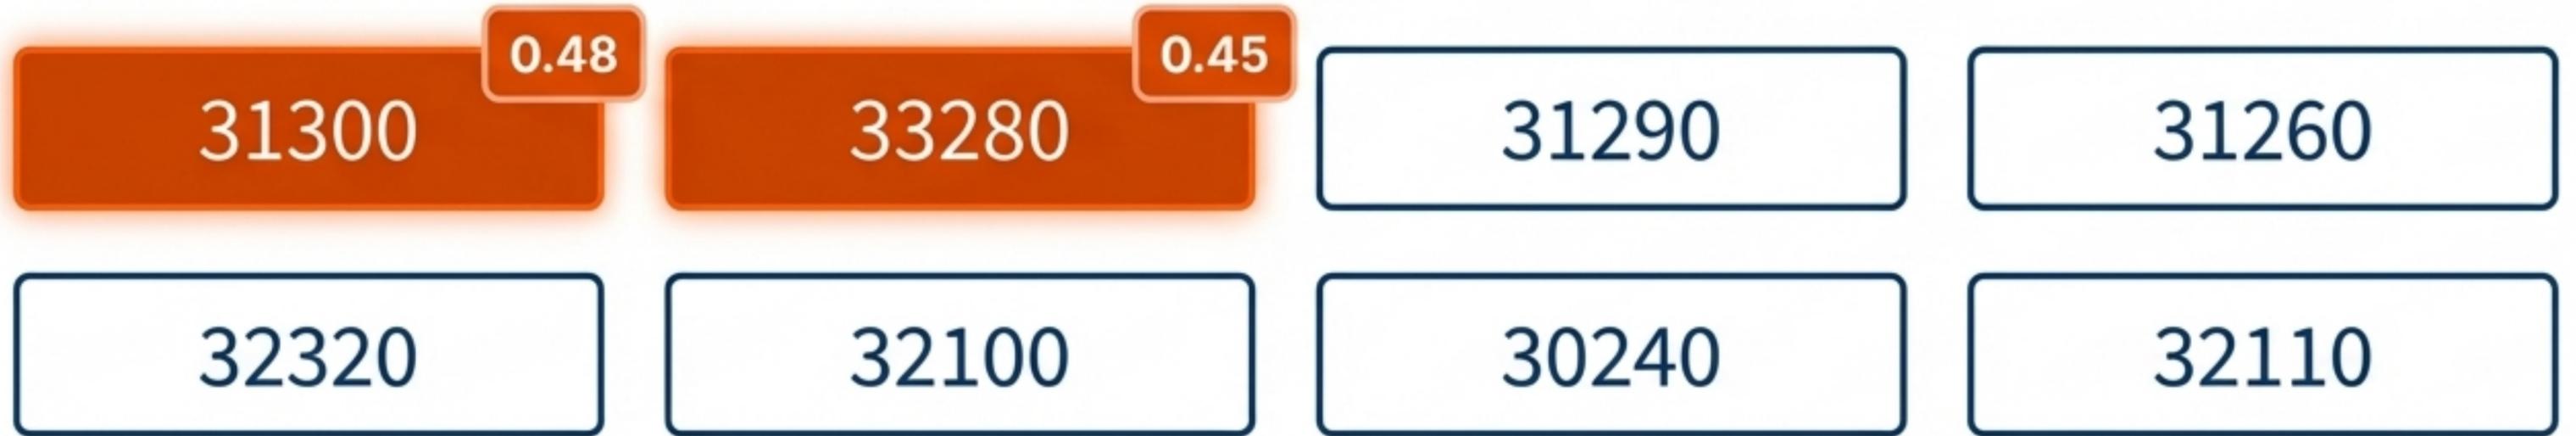

Emerging Predictors (New to 2018/19)

19 total indicators provide a robust, cross-validated monitoring framework for all childcare sites.

Predictor Dashboard: Residential Care Facilities

The Stable Core (Common across 2014, 2017, 2018)

Emerging Predictors (New to 2018/19)

Strategic Synthesis & Operational Readiness

Step 1

Methodology Validated.

The First Inspection approach successfully maintained data independence and replicated the analytical rigor of the 2017 study.

Step 2

Predictors Distilled.

28 total Key Indicators (19 Childcare, 9 Residential) have successfully passed the rigorous +0.26 Fiene mathematical threshold.

Step 3

Ready for Implementation.

The Health Protection Directorate now has a statistically backed, highly efficient framework to conduct differential monitoring across all Fraser Health facilities.
